PITCH DECK | GANTRI DIGITAL MARKETING MANAGER

A DTC marketing engine is only as trustworthy as the system behind the dashboard. Here is the system I would bring on day one.

Cross-channel reporting, paid media and email/SMS agency management, and structured testing programs, built once and automated, not rebuilt every cycle.

- **$100K/month** Paid Search and Paid Social budgets owned at Plug Power, CPA down 25%
- **3x ROAS** in one month for a fashion D2C brand at Pixis via full-funnel restructuring
- **16x ROAS** at GenY Medium rebuilding Google Merchant Center and Meta catalog feeds
- **8-person team** running paid media for 8 D2C clients at Pixis, the agency side of this exact relationship
- **Claude AI agents** automate recurring reporting today, at Applied Materials

WHY THIS DECK EXISTS

The risk in a DTC marketing engine is not the first campaign. It is who keeps the agencies and the reporting accountable every cycle after.

What a DTC marketing engine runs into

Paid media and email/SMS agencies each optimize to their own brief, so CAC, ROAS and MER drift apart unless one person owns both relationships and the targets.

Cross-channel reporting gets built once for a launch readout, then the next cycle is a manual pull because nobody owns the pixels, UTMs and server-side events feeding it.

A testing roadmap stalls between agency check-ins unless someone is running the calendar, not just reviewing it after the fact.

What I have already run, hands on

At **Plug Power**, I automated the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) into one closed-loop, cross-channel tracking and reporting system, not a deck I rebuilt by hand.

At **Pixis**, an ad-tech platform, I hired and managed an 8-person team running paid media for 8 D2C clients at $15K-$90K/month each, the agency side of the exact relationship this role owns.

At **Applied Materials**, I automate the recurring part of that reporting work with AI agents built on Claude today.

Own paid media and email/SMS agency relationships, build cross-channel reporting, and run structured testing programs: this is describing the exact loop I already run, from both sides of the agency table.

THE REQ, MAPPED

What the Digital Marketing Manager opening asks for, and where the proof sits.

What the role covers

> *"Build and own cross-channel performance reporting using multi-touch attribution."*

> *"Own paid media agency relationship (briefs, budgets, creative requests, testing roadmaps)."*

> *"Own email/SMS agency relationship (campaign calendar, flows, segmentation, deliverability)."*

> *"Run structured testing programs (audiences, creative, offers, landing pages)."*

My Proof

Plug Power Mar-Tech automation: Salesforce, Adobe Analytics, GA and Google Tag Manager tied into one closed-loop, cross-channel reporting system I built and owned.

Pixis agency management: hired and managed an 8-person team running paid media for 8 D2C client budgets, the same brief-budget-testing cadence from the agency's own side of the table.

Lead-flow and email automation: rebuilt the WordPress and Pardot lead flow at Plug Power (cost per lead down 50%) and led email and paid launch campaigns at Sensata (+35% qualified leads).

Structured testing at scale: 15+ A/B tests across 50+ inbound campaigns at Plug Power, plus full-funnel testing (shopping feed, bidding, creative, lookalikes) at Pixis.

THE DTC PROOF, IN DEPTH

Three ROAS numbers, three different levers, one habit: restructure the system, not just the ad.

Each result below came from rebuilding how the channel fed the next decision, not from a single creative swap. That is the habit a catalog of Gantri-designed products rewards: fix the feed and the targeting logic once, and every SKU after it inherits the lift.

3x ROAS

Fashion D2C Brand, Pixis

Full-funnel restructuring in one month: shopping feed cleanup, smart bidding, creative refresh and lookalike expansion.

16x ROAS

D2C E-Commerce, GenY Medium

Rebuilt Google Merchant Center and Meta catalog feeds so the right product data reached the right auction.

-25% CPA / -50% CPL

$100K/Month Budgets, Plug Power

Bid optimization, structured A/B testing and an automated WordPress/Pardot lead flow across Google, Meta, Microsoft and LinkedIn.

The common thread: own the feed, own the tracking, and let the testing roadmap compound instead of resetting every launch. That is the same loop I would bring to Gantri's DTC engine.

WHAT SUCCESS LOOKS LIKE, BY TIMELINE

A builder of systems ships a plan, not just a first campaign. Here is mine.

3 MONTHS

Stack mapped, tracking clean

Audit pixels, UTMs and server-side events across the paid media and email/SMS agencies, set CAC/ROAS/MER and contribution-margin targets, and ship the first cross-channel reporting view.

Why this is realistic: it is the same opening move behind the Plug Power Mar-Tech build: clean the tracking before trusting the numbers on top of it.

6 MONTHS

Testing roadmap running on a calendar

Run structured tests across audiences, creative, offers and landing pages on a campaign calendar coordinated with product launches, with both agencies briefed against it.

Why now: the same brief-to-test cadence I ran 15+ A/B tests on at Plug Power and the full-funnel tests I ran at Pixis.

12 MONTHS

System owned, agencies earning their retainer

Own the full reporting and testing system end to end, with both agency relationships evaluated on the same CAC/ROAS/MER targets set in month one.

Why this sticks: the same standard I held the Pixis agency-side team to, now applied from the client chair.

CLOSE

You are hiring a builder of systems, not a firefighter. I have already built this exact system, twice, from two different chairs.

The core proof: **$100K/month** in paid budgets owned end to end at Plug Power, with CPA down 25% and cost per lead down 50% once the Mar-Tech stack became one closed-loop reporting system instead of a monthly rebuild.

The other half is the agency chair: at Pixis I hired and managed an **8-person team running 8 D2C client budgets**, which is why I know what a paid media and email/SMS agency relationship should deliver, not just what it should cost.
