Hiring Team, Amazon Web Services (AWS)

Your posting draws a line between a program that scales and a one-off campaign checklist, and that line is where I have actually built things. At Sensata I did not just run a pricing dashboard once; I designed the FY2026 Bleeders and Leakers framework so it could be pointed at any region: 1,200 opportunities prioritized against a $627M target across 3 regions and 20 product lines, surfacing $433M in margin gaps by account. The hard part of ABM is the same problem, repeatable logic under account-specific variation, not a prettier slide.

The partner side of this req also maps to real work. I spent time with Sensata's senior executives on AP26 revenue models, site-transition strategy and multimillion-dollar customer quotes, which meant walking in with the number and the reasoning behind it for accounts that mattered most to the business. I built the account-specific content and competitive positioning that took 50+ reps to a 30% higher win rate, the same kind of asset this role calls account-specific content and messaging.

Coordinating across teams that do not report to each other is the part of the job description I recognize fastest. At GenY Medium I was the liaison keeping one program consistent across regional marketing, localization and analytics teams rather than letting each market freelance its own version; at Pixis I ran territory account strategy for 8 enterprise clients, each with its own P&L, cutting churn 50% through account-specific playbooks built on buying-signal data rather than bigger budgets. NAMER's roster of partner orgs (Global CoE, Industry, Partner, Digital, Events) is a bigger version of that same coordination problem, and it is the one I would rather solve than avoid.

Now, as Strategic Marketing III at Applied Materials, I automate the repetitive parts of that analysis with Claude AI agents so the account strategy work keeps the hours. Proof trail at adhi-product-ai.vercel.app/ref/aws.
