Hiring Team, Envoy

Your posting names a specific habit most deal desk candidates do not have: using AI to check quote completeness and flag contract discrepancies before they become someone's Monday-morning fire drill. I already run that habit daily. At Applied Materials I built my own agents on Claude to catch the same kind of recurring pricing and quote discrepancies before they reach a customer, and at PriceKeel I run CRM, CPQ, forecast reviews and deal approvals end to end for a product whose entire job is making discount exceptions explainable to Finance. That is the quote-to-cash discipline this seat owns, not a tool I am learning on the job.

The deal structuring side is not new either. At Sensata I shaped AP26 revenue models and multimillion-dollar customer quotes directly alongside senior executives, and the Bleeders and Leakers program I built ranked 1,200 pricing opportunities against a $627M target, which is exactly the kind of gap-finding and process-improvement work your posting asks for in the quote-to-cash flow. Using what that system surfaced, I recovered $700K+ in margin in two quarters and raised distributor and channel-partner margins from 53% to 61%, which meant holding my own line in the room while a partner pushed for more.

I like that this is framed as a hands-on, individual-contributor seat with room to build, not just process tickets. The PriceKeel guardrail engine and audit trail are the exact kind of deal-policy tooling I would want to bring into your deal desk documentation and approval workflow, and I have run project plans end to end rather than just participated in someone else's. Starting in Salesforce CPQ and cross-training into Chargebee for provisioning and billing is the kind of full quote-to-cash ownership I am looking for next.

What I would bring to Envoy is someone who has already built pricing and deal-approval tooling from scratch, not just operated inside it, and who has closed a quantified margin gap inside a large, multi-product business. Proof trail at adhi-pricing-ai.vercel.app/ref/envoy.
