Hiring Team, Snowflake

Fifty-plus Sensata reps picked up my sales enablement material and used it unchanged in the field, no rewrite needed, and win rates climbed 30%. That is the bar I read into "enable the field at scale" in your posting: a sales play good enough that a rep trusts it without a translation layer first.

The cross-regional piece is familiar territory too. I ran GTM for new sensing-product launches across North America and Europe at Sensata (positioning, pricing, channel), delivering $2M+ first-year revenue by aligning the global launch plan to how each region actually sold. Earlier, I ran retail-media and performance programs (Amazon Ads, Criteo) plus iOS app paid UA across an eight-client, AI-platform portfolio at Pixis, running paid media in international, non-English markets. That is the same discipline your MEA personas need: translating one global message into campaigns that land differently in each region without losing the thread back to the center.

I also know what it costs to turn technical capability into a business-value statement a decision-maker actually acts on. At Applied Materials I take deep input from Sales, Engineering and Accounts and turn it into one forecasting view multiple product groups can execute on; before that, I turned Sensata's sensor features into customer-facing value propositions that lifted conversion 15%. Both are the same translation job your posting calls out: platform value on one side, a sales team that needs plain language on the other.

I would welcome 30 minutes to walk through how the Sensata enablement work and the Pixis cross-regional campaign work map onto owning GTM for your MEA personas. Proof trail at adhi-product-ai.vercel.app/ref/snowflake.
