Hiring Team, Strava

At SwipeHire, my own AI job-matching platform, I modeled three subscription pricing tiers from competitor benchmarks and willingness-to-pay signals before a single line of pricing copy went live. Your posting asks for someone to own that same loop, pricing, packaging and messaging experiments that move free-to-paid conversion, at a much bigger scale, and that is the exact decision I have already made and lived with the consequences of.

I have run that build-test-measure cycle professionally too. At Sensata I owned the product roadmap and a 100+ feature backlog across 3 regions, working daily with engineering to prioritize what shipped next, work that cut time-to-market 20%. I did not guess at that backlog order. I ran 30+ structured interviews with OEMs and distributors to find where the product was actually breaking for them, then checked those claims against SQL and GA4 data before trusting them, the same discipline I would bring to reading Strava's conversion and churn numbers rather than acting on a hunch.

Retention is not new territory either. At Pixis I ran an 8-person team across 8 client accounts and cut churn 50% through account strategy and channel diversification, catching risk before a renewal date forced the conversation. On the experimentation side, I ran 15+ paid-search and paid-social tests at Plug Power that cut CPA 25%, and 8+ A/B tests on SwipeHire's own activation flow that lifted conversion 25%, full-funnel experiment design from the top to the pricing page, not just the parts that are easy to measure.

I would welcome the chance to talk through where I would start on Strava's subscription funnel, pricing, packaging, or renewal, and why. Proof trail at adhi-product.vercel.app/ref/strava.
