PITCH DECK | RUBRIK SENIOR IT PRODUCT MANAGER, CPQ

Rubrik's CPQ roadmap needs its rules engine moved toward AI agents with human-in-the-loop checkpoints. I already built that exact machine, end to end, as PriceKeel's guardrail engine.

A working human-in-the-loop guardrail for deal pricing, and the multi-product, multi-channel quote-to-cash work it has to simplify, on the same resume.

- **Human-in-the-loop guardrail engine** built from scratch at PriceKeel
- **Audit trail** Finance can check on every pricing exception
- **53% to 61% channel margins** raised at Sensata
- **Multimillion-dollar customer quotes** negotiated directly
- **AI agents built on Claude** automating my own recurring analysis today

WHY THIS DECK EXISTS

The req is not "administer a quoting tool." It is moving a rules-based CPQ engine toward AI agents with human-in-the-loop checkpoints, across multi-product and partner channels, without losing Finance's trust in the exception trail.

What that actually requires

A rules engine redesigned so an AI agent can recommend a pricing or discount action, but a human still signs it every time, the only way Product, Sales, Finance, Deal Desk and channel leaders trust the output.

An audit trail that survives a Finance review: who overrode what, against which evidence, not a log nobody opens.

Quote-to-cash that stays simple as product lines, partner tiers and channel structures multiply, not a workaround built per channel.

What I have already run

At **PriceKeel**, I designed the guardrail engine myself: it recommends a discount guardrail learned from each company's own closed-won and closed-lost deals, and logs every human override.

At **Sensata**, I repriced parts sold through distribution and raised distributor and channel-partner margins 53% to 61%, keeping quotes consistent across regions and product lines.

At **Applied Materials**, I run AI agents built on Claude against my own recurring pricing and quoting analysis, the same human-plus-agent workflow this role is scoping.

> **The through-line: every system here pairs an AI recommendation with a human decision a reviewer can audit later, not an agent making the call alone.**

THE MANDATE, MAPPED

What the role covers, and where the proof already sits.

What the role covers

Own CPQ product vision and roadmap for the quoting, configuration and pricing tools that sales and channel partners run on.

Move the rules engine toward AI agents with human-in-the-loop checkpoints.

Simplify quote-to-cash across multi-product and multi-partner channels.

Preferred: enterprise PM experience, B2B sales process knowledge, agentic workflows.

My proof

PriceKeel, CPQ ownership: founded and run the CRM, CPQ and deal-approval workflow myself, roadmap to rules engine, solo.

PriceKeel, guardrail engine: the human-in-the-loop, agentic pricing pattern, already built and in pilots with early customers.

Sensata, channel repricing: distributor and channel-partner margins raised 53% to 61%, multimillion-dollar customer quotes negotiated directly.

Sensata, product roadmap: a 100+ feature backlog run with Engineering in Agile across 3 regions, releases 25% faster.

THE PROOF, IN DEPTH

Build the guardrail, simplify the channel quote, then put a number on both.

Same pattern across a founder build and an enterprise pricing seat: design the human-in-the-loop decision point, simplify the quote path around it, then measure whether the business trusted the number enough to act on it.

Human-in-the-Loop

Guardrail Engine Built From Scratch

PriceKeel's rules engine recommends a discount guardrail from closed-won and closed-lost precedent; every override is logged for Finance.

53% to 61%

Distributor and Channel Margins Raised

Repriced parts sold through distribution at Sensata in under two quarters, without breaking existing channel-partner quotes.

$700K+ Recovered

Margin in Two Quarters

Bleeders and Leakers program: 1,200 pricing opportunities against a $627M target, $433M in margin gaps surfaced for leadership.

None of these stayed a roadmap slide. Each one shipped as a system Finance, Sales or a channel partner actually used.

FIRST 30 DAYS

What the first month on Rubrik's CPQ roadmap looks like.

WEEK 1

Map the rules engine and its stakeholders

Walk the quoting and configuration rules engine end to end with Product, Sales, Finance, Deal Desk and channel leaders, so the first AI-agent checkpoint targets the quote type with the most manual review today, not a guess.

Why first: the same first move behind PriceKeel's guardrail engine, map the exception pattern before automating around it.

WEEK 2-3

Ship the first human-in-the-loop checkpoint

Stand up one AI-agent recommendation, with a human sign-off and a logged override, on the highest-volume quote or discount type identified in week one.

Why now: the exact guardrail-plus-audit-trail pattern already running at PriceKeel, not a net-new design.

WEEK 4

Simplify one multi-partner quote path

Pick one multi-product, multi-channel quote flow and cut it down the way the distributor repricing work did at Sensata: fewer manual exceptions, same or better margin.

Why this fast: the same channel-quote discipline that moved Sensata's distributor margins 53% to 61%.

CLOSE

Rubrik needs a CPQ rules engine that trusts an AI agent's recommendation and still keeps a human signature on every quote. I have already built and run that exact machine.

The agentic half: **PriceKeel's guardrail engine** recommends a discount guardrail learned from closed-won and closed-lost deals, with every human override logged in an audit trail Finance can check on demand.

The quote-to-cash half: **distributor and channel-partner margins raised from 53% to 61%** at Sensata, multimillion-dollar customer quotes negotiated directly with senior executives, and a **$700K+ margin recovery** in two quarters built on a Power BI program tracking 1,200 opportunities against a $627M target. At Applied Materials I already run AI agents built on Claude against my own recurring pricing analysis, so the human-plus-agent workflow this role needs is not new to me.
