

PITCH DECK | PLAID PRODUCT MANAGER, FINANCIAL MANAGEMENT

Transactions, Investments and Liabilities already power millions of PFM experiences. The next unlock is not more data, it is a roadmap that proves its own ARR and adoption case to the customers paying for it.

A pricing-and-roadmap discipline built end to end before: a \$2M+ product launch owned start to finish, multimillion-dollar customer quotes shaped alongside senior executives, and an AI product built on a live API from PRD to pricing tiers.

\$2M+ GTM - Sensata sensing-product launch owned end to end, positioning through pricing through channel

53% to 61% margin - distributor pricing repriced, YoY revenue +12%

100+ feature backlog - roadmap run with Engineering across 3 regions, releases 25% faster

8-client account book - P&L and account conversations carried directly, churn -50%

Claude AI agents - automating repetitive analysis today, the same AI shift reshaping PFM tools

Owning Transactions, Investments and Liabilities end to end means the roadmap has to earn its ARR case with customers. **That is a pricing-and-account discipline, not a backlog-management one.**

What that actually requires

Discovering new problems across customer segments already live on the product, sized with evidence, not greenfield guesses.

Setting the adoption and ARR metrics a feature has to clear before it ships, and defending that call with qualitative judgment when the data is incomplete.

Influencing pricing and packaging for a product customers are already paying for, and being in the account conversations where that gets negotiated.

What I have already built at that layer

Owned **GTM for Sensata's new sensing products** end to end (positioning, pricing, channel, launch) to \$2M+ first-year revenue, with no existing playbook.

Partnered with senior executives on **multimillion-dollar customer quotes** and repriced distributor margins from 53% to 61% in under 2 quarters.

Carried **P&L directly across an 8-client account book** at Pixis; the account strategy conversations that came with it cut churn 50%.

The through-line: pricing and account-facing judgment are not a gap I would have to grow into on Financial Management. They are where my roadmap decisions have already been tested.

What the role covers, and where the proof already sits.

What the role covers

- Own the end-to-end problem: discover, size, ship and report on adoption and ARR for Financial Management products.
- Influence pricing and packaging, and participate directly in sales and account conversations.
- Work cross-functionally with Engineering and Design to ship intuitive experiences at scale.

My proof

- Sensata GTM \$2M+:** owned a launch end to end, positioning through channel, with no existing team or playbook to lean on.
- Sensata Pricing Lead:** multimillion-dollar customer quotes and distributor repricing, margins 53% to 61%.
- Sensata roadmap:** 100+ feature backlog run with Engineering across 3 regions, releases 25% faster.

SwipeHire: an API-integrated product built from PRD to pricing tiers, not handed a finished spec.

Built as an AI job-matching platform with a live OpenAI API integration behind it, the same build-price-measure loop a financial-data product roadmap runs on.

50+ Users

Early Adoption, Zero-to-One

Wrote the PRD, scoped the MVP and shipped the live API integration behind auto-tailored resumes and eligibility-aware matching.

3 Pricing Tiers

Packaging Modeled From Competitors

Defined the ICP and ran competitor teardowns to set the willingness-to-pay case behind each tier.

+25% Activation

From 8+ A/B Tests, 12+ Interviews

Ran the GTM and analytics stack (GA4, GTM, funnel dashboards) to test the story against real users.

The same end-to-end discipline carries over from Sensata, where I owned a product launch to \$2M+ in first-year revenue and the pricing that followed it, and from Applied Materials, where I build the value-based pricing models and automate the repetitive side of that work with Claude AI agents today.

What the first month owning a Financial Management product area would look like.

WEEK 1 Sit with customers already live on the product Talk to the teams building budgeting and PFM tools on top of Transactions, Investments or Liabilities before writing a roadmap line, the same customer-interview discipline that shaped Sensata's 100+ feature backlog. ----- Why first: a roadmap written before the customer conversation is a guess, not a plan.	WEEK 2-3 Size the next bet against ARR and adoption Pair qualitative interview signal with the adoption and ARR metrics the role is measured on, the same discipline that turned Sensata's KPI frameworks into an 18% adoption lift. ----- Why now: a feature that cannot show its ARR case gets deprioritized the first time budget gets tight.	WEEK 4 Ship the bet with the pricing call already made Bring Engineering and Design the feature and the pricing tier it ships in together, the same pairing that carried a \$2M+ Sensata launch end to end. ----- Why this fast: a PM who owns pricing and packaging ships fewer surprises to the account team.
---	--	---

CLOSE

Financial Management needs a PM who has already owned pricing, packaging and the account conversation around a live product, not just the backlog behind it. I have.

The core proof is Sensata: a product launch owned end to end, positioning through pricing through channel, to **\$2M+ in first-year revenue**, built on a roadmap I defined myself with Engineering across 3 regions.

What is harder to find is someone who has also carried the pricing and account side directly: multimillion-dollar customer quotes alongside senior executives, distributor margins repriced from 53% to 61%, and an 8-client account book run with full P&L ownership. I bring the same discipline to Transactions, Investments and Liabilities, and I keep building with AI tools today, automating repetitive analysis with **Claude agents** at Applied Materials.
