PITCH DECK | PEPPER CONTENT SENIOR MANAGER, FOUNDER'S OFFICE

You measure this seat on what gets done, not what gets discussed. Here is the operating record that already runs that way.

End-to-end program ownership, AI-first workflow rebuilds, and the operating cadence that makes a Founder's priorities visible in real time.

- **Founder & CEO** of PriceKeel, running the product, pilots and fundraising at once
- **Manual to AI-first:** rebuilt a repetitive analysis workflow on Claude agents at Applied Materials
- **$700K+** margin recovered scaling an ad-hoc program into a COE-grade playbook at Sensata
- **53% to 61%** distributor margin lift, a fix that held past the first cycle
- **India-US bridge:** cross-time-zone liaison between regional, localization and analytics teams

WHY THIS DECK EXISTS

A Founder's Office seat carries two different jobs at once: run today's fire drill, and build the system so it is not a fire drill next quarter.

What the seat actually demands

A founder-level initiative shows up as a sentence, not a brief. Someone has to turn it into goals, milestones and an owner before any team can move.

Functions that are still founder-led or ad-hoc need the same rigour a central Centre of Excellence would bring: a playbook, a dashboard and a cadence that holds after the builder leaves the room.

AI transformation is the third leg: finding the workflow burning the most hours and rebuilding it AI-first before asking a team to scale it.

What I have already run, on all three

At **PriceKeel**, I am the founder turning a sentence into a product right now: the guardrail engine, the audit trail, the CRM and deal-approval process, all built from zero.

At **Sensata**, I took an ad-hoc margin program with no owner and scaled it into a company-wide playbook, the same COE-grade rigour this seat asks for.

At **Applied Materials**, I am converting manual analysis into agents built on Claude, the AI-first rebuild this seat is supposed to drive across the business.

Running the fire drill and building the system that prevents the next one are not two different hires. I have done both, on the same initiative, more than once.

THE REQ, MAPPED

What Pepper Content is asking for, and where the proof already sits.

What the role covers

> *"Drive end-to-end program management for the Founder's most critical initiatives, set goals, define milestones, unblock teams."*

> *"Lead AI transformation programs... identify high-leverage workflows and deploy AI-first solutions."*

> *"Partner with the central COE team to scale playbooks, processes and tooling across business units."*

> *"Build dashboards, reviews and operating cadences that give the Founder real-time visibility."*

My Proof

PriceKeel, founded and run today: the goal, the milestones and the unblocking all sit with one owner, because there is no one else yet.

Applied Materials: converted a manual, repetitive analysis workflow into one run by agents built on Claude, the AI-first rebuild this role asks for.

Sensata Bleeders and Leakers: scaled across 3 regions and 4 product families the way a central COE would, recovering $700K+ in 2 quarters.

Sensata: built the leadership decks and ran the OKR cadence behind weekly and quarterly reviews that gave executives real-time visibility.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: the playbook a central COE would run, built by one person first.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Opportunity Surfaced

Ranked every underperforming line into a case leadership could act on, instead of chasing anecdotes account by account.

$700K+

Margin Recovered in 2 Quarters

Closed through negotiations grounded in competitive data and documented customer willingness to pay, not blanket price hikes.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself, so the fix held past the first cycle instead of drifting back within a quarter.

The same program carried AP26 revenue models and multimillion-dollar customer quotes directly with senior executives, plus the leadership decks and OKR cadence that kept a multi-$100M business aligned, then a promotion in 10 months once it ran without daily oversight. Find the number, build the system, hand it off clean.

FIRST 30 DAYS

What the first month as Pepper Content's Senior Manager, Founder's Office looks like.

WEEK 1

Map what is unowned

Sit with the Founder and the central COE team to find which initiatives, business units and workflows are still ad-hoc, and shadow one US-facing review end to end.

Why first: the same move that surfaced the Bleeders and Leakers program at Sensata before building anything.

WEEK 2-3

Build the operating layer

Turn the highest-leverage workflow into a definition, a dashboard and a review cadence the Founder can see within 24 hours, and partner with product and engineering to rebuild the manual steps AI-first.

Why now: building the model with the real stakeholders in the room is what made the 53% to 61% distributor gain stick.

WEEK 4

Ship v1 and hand off the first playbook

Launch a working v1 rather than wait for a perfect plan, measure it against speed, cost or quality, then document it as the first playbook the COE can scale to a second business unit.

Why this fast: a function only counts as fixed once it can run without you in the room, and you have moved to the next problem.

CLOSE

You are hiring someone to take a sentence from the Founder and come back with a shipped outcome. I have already run that motion on a product, a margin program and an AI rebuild.

The founding half of the proof is live today: **PriceKeel**, built from inception, with its own guardrail engine, audit trail and deal-approval process, now in pilots while I raise the company's first round.

The scale-the-playbook half is Sensata: **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%**, built with the COE-grade rigour this seat asks for. I am already converting manual work to AI-first at Applied Materials, and I have run the India-US, cross-time-zone bridge before at GenY Medium.
