Hiring Team, LegalZoom

At Sensata I built a pricing program called Bleeders and Leakers that priced to what distributors would actually pay instead of anchoring to list price. It recovered \$700K+ in margin in two quarters and moved distributor margins from 53% to 61%. That is the same behavioral-economics instinct your posting asks for in a Senior Product Marketing Manager: price to willingness to pay, not to a spreadsheet assumption.

Before that I owned the go-to-market for a new sensing product line across North America and Europe, positioning, pricing, channel and launch as one motion instead of handed off in pieces, and it closed its first year at \$2M+ in revenue. I got there by running 30+ interviews with OEMs and distributors first, which is also how I would want to find the friction points in a LegalZoom business line's customer journey before locking a roadmap.

Your posting calls out building AI agents and automated workflows in Claude, ChatGPT and Gemini, with a human-in-the-loop model. I already run that pattern: I automate recurring pricing and market analysis with AI agents built on Claude at Applied Materials, keeping a human decision on every output that carries P&L weight. That is not a tool I would need to ramp into.

I would bring that same pattern, own the number from positioning through pricing through the channel, to a LegalZoom business line. Proof trail at adhi-product-ai.vercel.app/ref/legalzoom. Happy to talk whenever works on your side.
