Hiring Team, H1

Your posting asks for experience using AI assistants like Claude to accelerate RevOps workflows, listed as a requirement rather than a nice-to-have. At Applied Materials I already run AI agents built on Claude against my own repetitive RevOps reporting and analysis work, so the Develop AI agents, skills, and workflows line in your posting describes something I do weekly, not something I would need to learn on the job.

The Deal Desk and CRM governance half of the role is where I spend the rest of my time. At PriceKeel, the company I founded, I run the CRM, CPQ, forecast reviews and deal approvals myself: structuring and approving non-standard deals with Finance and building the audit trail they can check on demand. That is close to a one-to-one match for execute Deal Desk workflows and oversee CRM data quality, field governance, audit processes in your posting, because I built that process rather than just following one.

The analysis and reporting side comes from Sensata, where I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pipeline opportunities tracked against a $627M target by win rate, dollar-per-win and stage distribution across 3 regions and 20 product lines. That dashboard surfaced $433M in margin gaps for leadership to prioritize by salesperson and product line, which fed into a $700K margin recovery over two quarters, the same translate business questions into data pulls, findings and recommendations work your Commercial org needs for territories, quotas and KPIs.

H1's mission of putting data behind every doctor interaction is the kind of problem where a RevOps function has to move fast without breaking the Commercial org's trust in its own numbers, which is the exact tension I have been solving at PriceKeel and Sensata. Proof trail at adhithyabhaskar.vercel.app/ref/h1.
