Hiring Team, SpaceXSI

Your posting asks for a product marketer who can turn a deeply technical product into a story a developer actually reads, then use what they hear back to help shape what gets built next. That is the loop I ran at Sensata: I owned go-to-market for a new line of sensing products end to end, positioning, pricing, channel and launch, working directly with the engineers who built the hardware, and it closed $2M+ in first-year revenue with a 35% lift in qualified leads.

The "deeply technical into simple and compelling" half of the role is where I spend most of my time. I turned sensor specs that only an OEM's own engineers understood into value propositions distributors could repeat, which lifted conversion 15% on priority launches, and I ran 30+ structured interviews with OEM and distributor engineers so the positioning came from what they actually struggled with, not a guess, raising CSAT 22%. I also built the sales enablement, decks and case studies, that let 50+ reps sell a technical product line without me in the room, improving win rates 30%.

I don't come at developer-facing products as an outside observer. I built an AI job-matching platform myself end to end, Python, OpenAI API, React, wrote the PRD, shipped it, and then ran its GTM and positioning solo, including the competitor teardowns and pricing. At Applied Materials today I size a fast-moving semiconductor market with Sales, Engineering and Accounts and automate the recurring analysis with Claude AI agents, so I read a technical roadmap and an AI workflow with the same fluency I'd bring to positioning Grok's products for developers.

What I'd bring to SpaceXSI is someone who has already run the full launch-to-adoption loop on technical products, positioning them for the people who actually build with them, testing what lands, and feeding it back into the roadmap, without needing a runway to get there. Proof trail at adhi-product-ai.vercel.app/ref/spacexsi.
