Hiring Team, OpenAI

At Sensata I owned the complete go-to-market loop this posting describes: positioning, pricing, channel and launch for new sensing products across North America and Europe, grounded in 30+ customer interviews with OEMs and distributors who told me which capability actually mattered to them. That work drove \$2M+ in first-year revenue. It is the same pattern I would bring to OpenAI's first hardware push, where a device built for a mainstream audience, not just developers, has to land clearly on day one.

The research habit is what made the messaging hold up. I ran competitor and customer analysis across EMEA and the US, then built sales enablement and reusable playbooks for 50+ reps that lifted win rates 30%. I also built KPI frameworks in SQL and GA4 that turned a single launch into a repeatable measurement process other teams could run again. Audience segmentation only works if the second and third campaign are as sharp as the first, and that is the part of this role I would focus on early.

I also already build with the tools this launch will run on. I automate recurring research and analysis with Claude AI agents as Strategic Marketing III at Applied Materials, carrying P&L targets for the role, and I built an AI job-matching platform end to end on the OpenAI API, from the PRD through onboarding the first 50 users. That is the same build-test-ship loop I would bring to introducing a new device to people who have never used an AI product before.

What I would bring to this role is a marketer who has already run GTM end to end on hardware, not just software, and who treats AI tools as part of the daily workflow rather than a separate initiative. I would welcome the chance to talk through how that applies to this launch. Proof trail at adhi-product-ai.vercel.app/ref/openai.
