

PITCH DECK | OPENAI INTEGRATED MARKETING MANAGER, HARDWARE

# Your first hardware device has to land with people who have never used a developer tool. I have already run that exact translation, at revenue-bearing scale.

*Audience segmentation, cross-functional GTM and AI-native workflows, proven on hardware before.*

**\$2M+** first-year revenue from a new-hardware GTM launch at Sensata

**30+** customer interviews behind every segmentation decision

**+30%** rep win rate from reusable sales enablement built for 50+ reps

**Claude AI agents** automating recurring research and analysis today

Shipped a product on the **OpenAI API** myself

# Audience segmentation is not a messaging exercise for a first hardware device. It is the difference between a launch mainstream buyers understand and one only developers do.

## What the role actually asks for

Translate product capabilities into clear, differentiated messaging for distinct audiences, backed by real audience segmentation frameworks, not a single generic narrative.

Lead cross-functional marketing programs end to end: research, competitive analysis, partnership opportunities across global markets, and campaign measurement built as a reusable process.

Coach peers and move fluently between strategy and hands-on execution, with deep comfort in AI products and how people actually use them.

## What I have already run

At **Sensata**, I owned GTM end to end for new sensing products across North America and Europe, built on **30+ customer interviews**, driving **\$2M+ in first-year revenue**.

I built **sales enablement and reusable playbooks** for 50+ reps that lifted win rates 30%, the coaching and cross-functional half of this posting.

I automate recurring research with **Claude AI agents** at Applied Materials today, and I built a product end to end on the **OpenAI API** myself.

The product fluency this role asks for is not abstract for me. I have shipped on the OpenAI API myself, and I use AI agents daily to do the job the posting describes.

# What the Integrated Marketing Manager, Hardware opening asks for, and where the proof sits.

## What the role covers

*"Translate product capabilities into clear, differentiated messaging relevant to distinct audiences."*

*"Develop audience segmentation frameworks."*

*"Deep familiarity with AI products, foundation models, generative AI capabilities and limitations, and common user workflows."*

## My Proof

**Sensata hardware GTM launch:** owned positioning, pricing and channel for new sensing products, driving \$2M+ first-year revenue on 30+ grounding customer interviews.

**Sales enablement at scale:** reusable playbooks and decks for 50+ reps, +30% win rates, the cross-functional coaching half of this posting.

**Built on the OpenAI API:** shipped an AI job-matching platform end to end, and automate recurring analysis with Claude AI agents at Applied Materials now.

**Competitive rigor:** ran EMEA and US competitor and customer analysis that directly informed launch messaging and channel strategy.

# New-hardware GTM: research the buyer, segment the audience, arm the field, close the revenue.

Owned the full go-to-market for new sensing products across North America and Europe: positioning, pricing, channel strategy and launch, grounded in 30+ customer interviews with OEMs and distributors.

\$2M+

First-Year Revenue

The outcome the segmentation and channel decisions were built to produce, not a vanity engagement metric.

30+

Customer Interviews

OEMs and distributors interviewed to build the audience segmentation the positioning was actually built on.

+30%

Rep Win Rate

From sales enablement and reusable playbooks built for 50+ reps who needed the message in a usable form.

The same cycle ran competitor and customer analysis across EMEA and the US to find revenue opportunities in purchasing patterns and competitor market share, feeding directly back into the next launch's segmentation.

# What the first month on this hardware launch team looks like.

|                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                             |

CLOSE

**You are hiring someone to segment audiences, run global GTM programs, and use AI as part of the job. I have already run all three, together, at revenue-bearing scale.**

The core proof is Sensata: **\$2M+ first-year revenue** from a new-hardware GTM launch, **+30% rep win rate** from reusable sales enablement built for 50+ reps, and **30+ customer interviews** behind every segmentation decision.

What is harder to find is someone who has already **shipped on the OpenAI API** and is **using Claude AI agents** to automate recurring analysis today, which means the AI-product fluency this posting asks for is a current habit, not a claim.
