Hiring Team, AMAX

At Sensata I owned the GTM for a new line of sensing products across North America and Europe, positioning, pricing, channel and launch, and it drove \$2M+ in first-year revenue while a parallel digital campaign push added +35% qualified pipeline. That is close to the motion your posting describes: a marketing manager who can take a hardware-adjacent product, turn its technical edge into a message buyer-ready personas respond to, and point a demand-generation engine at the pipeline number.

The brand and product-marketing side is just as direct. I translated Sensata's technical specs into buyer value propositions that lifted conversion 15% on priority launches, built the sales enablement decks and case studies that armed 50+ reps and raised win rates 30%, and ran 30+ customer interviews with OEMs and distributors to shape personas and messaging. On the team and budget side, I hired and mentored an 8-person team at Pixis against P&L targets, and I owned \$100K/month budgets across multiple business units at Plug Power, the vendor and budget ownership a marketing leader needs to run demand gen, content and events in one operating cadence.

AMAX's move from standard IT systems into GPU-accelerated, high-performance computing infrastructure sits close to where I have spent my career. Applied Materials' semiconductor market sizing work and Sensata's industrial sensing GTM both live in the same enterprise-infrastructure territory your buyers and channel partners operate in, and I carry P&L and revenue targets in that role today. I also automate my own reporting there with Claude agents, the kind of marketing-ops habit that keeps a lean team's dashboards current without adding headcount.
