PITCH DECK | DOORDASH ASSOCIATE MANAGER, NEW VERTICALS - AFFORDABILITY STRATEGY & OPERATIONS

The posting asks for someone who reads the full P&L, order and pricing data to find where fee structure can move without losing the business. I built that exact model at Sensata, at a $627M scale, and recovered $700K+ in two quarters running what it found.

A pricing-and-margin model built from scratch, a channel-margin repricing program, and the Claude-agent habit already running at Applied Materials.

- **$627M target** structured from 1,200 untracked opportunities at Sensata
- **$700K+ margin** recovered in 2 quarters from that structure
- **53% to 61%** distributor margins raised in under 2 quarters
- **PriceKeel:** owns CRM, CPQ, forecast reviews and deal approvals, with an audit trail Finance can read
- **AI agents built on Claude** automating my own pricing analysis today

WHY THIS DECK EXISTS

This req is not "monitor a fee dashboard." It is owning the P&L-to-pricing-decision pipeline on a lever that reaches millions of customers.

What the posting actually asks for

Read the full P&L, order and pricing data to find where a fee change moves affordability without losing margin.

Partner with Finance and Analytics to forecast the consumer and financial impact of a pricing change, then design the A/B test that proves it.

Use AI tools like Claude and Cursor to automate the analysis and move faster, and own the metrics and dashboards other teams rely on.

What I have already built, the same way

At **Sensata**, I turned a $627M target and 1,200 untracked pricing opportunities into a structured, prioritized plan that surfaced $433M in margin gaps and recovered $700K+ in two quarters.

On the channel side, I repriced parts sold through distribution and raised margins from **53% to 61%** in under two quarters, backed by competitive benchmarking across 10+ players.

At **Applied Materials** today, I automate repetitive pricing and forecasting analysis with AI agents built on Claude; at **PriceKeel**, I run the CRM, CPQ, forecast reviews and deal approvals myself, with an audit trail Finance can read.

The through-line: every build on this page started as scattered P&L, order or pricing data with no model built yet, and ended as a number Finance could act on.

THE MANDATE, MAPPED

What the posting asks for, line by line, and where the proof already sits.

What the role covers

> *"Understand end to end financials... to drive changes to how we make DoorDash more affordable."*

> *"Partner with Finance and Analytics in forecasting consumer and financial impacts, building pricing models, design A/B tests."*

> *"Leveraging AI tools like Claude and Cursor to automate and move faster."*

> *"Own the metrics and dashboards for your programs, sharing with partners across the New Verticals organization."*

My proof

Sensata Bleeders and Leakers: turned a $627M target and 1,200 untracked opportunities into a prioritized plan, surfacing $433M in margin gaps and recovering $700K+ in two quarters.

Sensata channel margin program: repriced parts sold through distribution, 53% to 61% margins, backed by competitive benchmarking across 10+ players.

Applied Materials: automates repetitive pricing and forecasting analysis with AI agents built on Claude.

Plug Power and PriceKeel: ran 15+ A/B tests tying results to measurable CPA and conversion gains; PriceKeel's audit trail is the dashboard model this role needs for Finance.

THE PROOF, IN DEPTH

Structure the data first, then let the numbers carry the pricing decision instead of a hunch.

Three different environments, same pattern: find the fee or margin lever nobody has modeled yet, build the structure before anyone asks for one, then put a number on the outcome that Finance or leadership can audit.

$627M Target

Structured From 1,200 Untracked Opportunities

Sensata's Bleeders and Leakers Power BI model, built from scratch, with no existing method to extend.

$700K+ Recovered

In Two Quarters, From That Structure

Margin-recovery negotiations run directly off the dashboard's prioritization, not off a hunch about which deals mattered.

53% to 61%

Distributor Margins, Under 2 Quarters

Channel repricing backed by competitive benchmarking across 10+ players, the closest analog to two-sided fee economics.

None of these started with a dashboard already built. Each one started as P&L, order or pricing data nobody had structured yet, and ended as a lever leadership could pull.

FIRST 30 DAYS

What the first month on DoorDash's fee and affordability data looks like.

WEEK 1

Map the P&L for the first fee lever

Pull order, pricing and P&L data for the fee structure furthest along, and build the same opportunity-sizing view that scoped Sensata's $627M target, this time against fee and affordability impact.

Why first: the same first move behind every build on this page, structure the data before touching the lever.

WEEK 2-3

Build the pricing model, design the A/B test

Partner with Finance and Analytics to forecast the consumer and financial impact of the change, then design the A/B test that will prove it, the same forecast-then-test sequence behind the 53% to 61% distributor repricing.

Why now: a fee change is a bet; the model and the test are what make it a calculated one.

WEEK 4

Launch the test, wire the dashboard, bring an AI agent

Ship the A/B test, build the metrics and dashboard the rest of New Verticals will read, and bring the first Claude-agent pass at automating that readout, the same habit running at Applied Materials today.

Why this fast: a dashboard only earns trust once it updates itself and the team can see it.

CLOSE

You are hiring someone to turn P&L, order and pricing data into a fee and affordability lever that reaches millions of customers. I have already run that exact model, at a $627M scale, twice.

Sensata's **$627M** Bleeders and Leakers program, structured from 1,200 untracked opportunities, recovered **$700K+** in two quarters; the channel half raised distributor margins from **53% to 61%**, backed by competitive benchmarking across 10+ players.

PriceKeel runs that same pricing-decision pipeline today, CRM to CPQ to deal approval to an audit trail Finance can read, and Applied Materials automates the repetitive side of it with AI agents built on Claude, so more hours go to the fee lever that actually moves the P&L.
