Hiring Team, Autodesk

Your posting asks for someone who analyzes transaction data, builds analytical pricing models and develops pricing strategies for new offerings. That is the exact sequence I ran at Sensata: I read the transaction history behind 1,200 open pricing opportunities in a Power BI dashboard I built against a \$627M target, then used it to recover \$700K+ in margin in two quarters and raise distributor margins from 53% to 61%.

The "new offerings" half of the role is where I priced a sensing product line at launch, across North America and Europe, running 30+ customer interviews to pressure-test willingness to pay before we set the number. That launch closed its first year at \$2M+ in revenue. I did the market and competitive work the same way I do it now at Applied Materials, where I build value-based pricing and inflection-point forecasting for a fast-growing semiconductor market and automate the repetitive parts of that analysis with AI agents built on Claude.

The B2B SaaS pricing experience your posting calls a plus is the company I am building. At PriceKeel, I run the CRM, CPQ configuration and pricing-governance audit trail myself for a deal-pricing product sold into B2B SaaS, so I know the mechanics of a subscription pricing decision from the inside, not just from a market report.

Autodesk prices design and make software across a wide product line the way Sensata priced sensors across a wide product line: many SKUs, one pricing discipline. Proof trail at adhi-pricing-ai.vercel.app/ref/autodesk.
