PITCH DECK | SOVOS SENIOR PRODUCT MARKETING MANAGER - PRICING

A pricing and packaging decision only moves revenue once Sales trusts the story and Finance trusts the math behind it. I have built that trust twice: once inside a multi-$100M industrial BU, and once from a blank system.

Built from the Bleeders and Leakers program that recovered $700K+ in margin in two quarters at Sensata, and the Finance-auditable pricing-evidence layer running at PriceKeel today.

- **$700K+ Recovered** - Sensata Bleeders & Leakers margin-recovery program
- **53% to 61%** - distributor and channel-partner margin lift
- **Finance-Auditable Evidence** - built end to end at PriceKeel
- **Battlecards & Exec Narratives** - built the story that got pricing adopted in the field
- **Claude AI Agents** - automating adoption and discounting analysis today

WHY THIS DECK EXISTS

A pricing or packaging change that never reaches the field is a strategy memo, not revenue. The gap between the two is a product marketing and commercial-analysis job.

What a global pricing seat actually requires

Turning approved pricing and packaging decisions into sales narratives, battlecards and exec communications that reps use on a live call, not a deck that gets opened once.

Partnering with Finance and BizOps on commercial-impact analysis so the pricing story holds up against real deal economics, not just a list-price change.

Reading adoption, discounting and expansion data fast enough to catch where a new price or package is losing in the field before the quarter closes.

What I have already built at that layer

Led **Sensata's Bleeders and Leakers program**: turned a messy discount dataset into guidance Sales acted on, recovering $700K+ in margin in two quarters.

Built the **sales battlecards and exec-ready decks** behind a price realignment that drove +12% YoY revenue and +8% market share.

Built **PriceKeel's Finance-auditable audit trail** from a blank system, the same evidence layer commercial-impact analysis depends on.

> **The through-line: pricing strategy, the narrative that sells it, and the evidence that defends it are not three separate hires here. They are one habit I already run.**

THE MANDATE, MAPPED

What the role covers, and where the proof already sits.

What the role covers

> *Own product marketing for pricing, packaging and monetization initiatives across a global SaaS portfolio.*

> *Build sales narratives, battlecards and exec communications, and partner with Finance and BizOps on commercial-impact analysis.*

> *Use AI tools to analyze adoption, discounting and expansion data.*

My proof

Sensata Pricing Lead: owned global pricing strategy for a multi-$100M Industrial BU, recovering $700K+ in margin and raising distributor margins from 53% to 61%.

Sales enablement: built the battlecards, competitive benchmarking and customer quotes that turned price realignment into +12% YoY revenue.

AI-driven analysis: automate adoption and discount-pattern analysis with Claude AI agents today as Strategic Marketing III at Applied Materials.

THE CLOSED-LOOP PROOF, IN DEPTH

Bleeders and Leakers: the margin was always there. It just needed a narrative Sales would act on.

1,200 pricing opportunities against a $627M target do not recover a dollar until a rep believes the new number and a Finance partner signs off on it. That belief is the product-marketing layer I built.

$700K+ Recovered

Bleeders & Leakers, 2 Quarters

Negotiations built on competitive gaps and customer willingness to pay, carried to Sales through a narrative they could repeat.

53% to 61%

Distributor & Channel Margin

Repriced parts sold through distribution in under two quarters, the kind of channel-pricing story every rep needed to tell the same way.

$433M Surfaced

Margin Gaps, FY2026 Dashboard

Power BI dashboard across 3 regions, 4 product families and 20 product lines, giving leadership the commercial-impact view to prioritize by salesperson.

The same discipline runs PriceKeel's Finance-auditable evidence layer today, and automates adoption and discount-pattern analysis with Claude AI agents at Applied Materials.

FIRST 30 DAYS

What the first month inside Sovos's pricing and monetization product marketing seat would look like.

WEEK 1

Map where today's pricing story loses the field

Trace which pricing or packaging decisions reps are not repeating confidently, the same first step that found the $700K at Sensata's Bleeders and Leakers program.

Why first: a battlecard built before the gap is mapped answers the wrong objection.

WEEK 2-3

Rebuild the battlecards and the Finance-facing math together

Pair the sales narrative with the commercial-impact analysis Finance and BizOps need to sign off, the same discipline behind Sensata's AP26 revenue models and customer quotes.

Why now: a narrative Finance will not back gets pulled the first time Sales quotes it.

WEEK 4

Stand up the adoption and discounting read

Use AI tools to turn adoption, discounting and expansion data into a recurring read leadership can act on, the same habit automating pricing analysis with Claude agents today.

Why this fast: a read built once scales to the next pricing change without a rebuild.

CLOSE

Sovos needs a pricing story that survives contact with Sales and an audit by Finance. I have already built both halves.

The core proof is Sensata: the Bleeders and Leakers program recovered **$700K+ in margin in two quarters**, and the battlecards and competitive benchmarking behind it drove a price realignment to **+12% YoY revenue and +8% market share**. That is the sales-narrative half of this role, proven across a multi-$100M Industrial BU.

The Finance-facing half is just as real. I partnered directly with senior executives on AP26 revenue models and multimillion-dollar customer quotes, and I am building that same commercial-impact discipline from scratch at PriceKeel's Finance-auditable evidence layer. I automate the adoption and discounting side of that work today with **Claude AI agents** at Applied Materials, the habit I would bring to a global portfolio at Sovos.
