Hiring Team, Harvey

At Sensata I turned a connected-sensor workflow change into the positioning an OEM buyer would sign off on before a single demo, lifting conversion 15% on priority launches. That is the job you are describing: take a complex, workflow-driven capability and connect it to the business outcome an enterprise legal buyer actually cares about, then prove it in language sales can use in the room.

Translating one product into several buyer languages is not new to me either. At Simon I led a 5-consultant team that split a single product into vertical-specific positioning across four industries, from a 170-facility market down to a 28-facility SAM, each with its own personas and proof points. At Sensata I ran 30+ interviews with OEM and distributor buyers to find what was actually blocking adoption, then built the messaging frameworks and case studies that took a 50-person rep team's win rate up 30%. Writing launch content that lands differently for litigation, transactional and corporate teams is the same discipline: find each audience's real objection, then write the asset that answers it.

I also use the category of product Harvey sells. I run AI agents built on Claude weekly at Applied Materials to automate forecasting and market analysis, and I hold all four Claude certifications. I shipped SwipeHire, a job-matching platform on the OpenAI API, from a blank PRD to 50+ users, including the positioning and pricing tiers that got it there. Writing enablement for an agentic workflow product is more credible coming from someone who has actually built on one.
