Hiring Team, DoorDash

Your posting lists comfort with AI tools like Claude and ChatGPT as a must-have, not a nice-to-have, and that line stood out because it is already how I work, not a skill I would pick up on the job. At Applied Materials I run AI agents built on Claude to automate the forecasting and market-sizing analysis behind a semiconductor P&L, and I built an AI job-matching platform on the OpenAI API from a blank page. A paid media operation that wants someone who treats these tools as infrastructure, not novelty, is the kind of seat I am looking for.

The other half of this role is owning a team and a budget end to end, and I have done both at a scale close to what you describe. At Pixis I hired and ran an 8-person team carrying P&L for 8 client accounts, each with its own \$15K-\$90K monthly media budget across paid search, paid social and retail media, and cut churn 50% through account strategy and channel diversification. At Plug Power I owned \$100K/month in budgets across Google, Microsoft, Meta and LinkedIn myself, building the plans the leadership team approved and cutting CPA 25% through the same root-cause optimization loop your posting describes for channel mix and creative decisions.

Cross-functional ownership without direct authority is where I have spent most of my career. At Sensata I ran 30+ structured interviews with OEMs and distributors across 3 regions, turned that into a KPI framework in SQL and GA4 that lifted qualified leads 35%, and built the sales enablement and leadership decks that kept Sales, Engineering and Finance reading from the same recap. That is the same muscle a co-marketing calendar needs when a campaign slips and three teams need one clear recommendation, not three opinions.

I would welcome 15 minutes to talk through how you want the Cx Ads Paid team's operating model to scale as it grows. Proof trail at adhi-growth-ai.vercel.app/ref/doorDash.
