Hiring Team, Sardine

At PriceKeel I run the CRM and CPQ myself, plus forecast and pipeline reviews and deal approvals, so when your posting said this seat sits at the intersection of Revenue Operations and GTM Engineering, building a lean, automated go-to-market machine, that description matched work I already do, not one I would need to grow into.

The vibe coding edge you are asking for is not new to me either. At Applied Materials I automate repetitive revenue analysis with AI agents built on Claude instead of waiting on an engineering queue, and at PriceKeel I designed a guardrail engine that turns closed-won and closed-lost deal data into an explainable discount rule, shipped as working logic, not a requirements document. Before that, I built Sensata's FY2026 Bleeders and Leakers Power BI dashboard, tracking 1,200 pricing opportunities against a \$627M target with win rate, dollar-per-win and stage distribution by salesperson, and used it to recover \$700K in margin in two quarters. That is the same clean-data-architecture and funnel-metrics habit you are asking the next Revenue Operations Manager to own.

Cross-functional translation is where most of this work actually lands. At Plug Power I synced the Mar-Tech stack, Salesforce, Adobe Analytics, GA and Google Tag Manager, into one closed-loop reporting layer, and stood between marketing, sales and finance so the same number meant the same thing to all three. Wiring platforms together to pull manual handoffs out of the lead-to-cash cycle is a habit I already run, not a new assignment.

I would welcome the chance to talk through how this maps to the role. Proof trail at adhithyabhaskar.vercel.app/ref/sardine.
