

PITCH DECK | SIGMA SR. PRODUCT MARKETING MANAGER, SIGMA APPS

Sigma Apps needs positioning that holds up in the IT review and in the business owner's five-minute demo. I have already written for both sides of that room.

Dual-audience positioning, sales enablement built from real win/loss, and competitive battlecards, from someone who ran this loop on a technical product and tied it to a revenue number.

\$2M+ first-year revenue from a GTM launch written for engineers and business buyers at once

+15% conversion lift on launches after rewriting specs as buyer value

50+ reps, +30% win rate on sales enablement decks and competitive one-pagers

30+ interviews turned into win/loss insight before a single deck shipped

Claude AI agents automate the repetitive half of competitive analysis today

Write only for the IT reviewer and the business buyer tunes out. Write only for the business buyer and **the IT review stalls the deal.**

What losing that split costs a team like Sigma Apps

A no-code app platform sells on two different conversations in the same deal: can IT govern and scale it, and can the business team actually ship with it. Positioning that only answers one of those reads as a pitch deck, not a reason to buy.

Reps feel that gap first. A battlecard built for the IT conversation goes unused in the line-of-business meeting, and the field quietly writes its own version, off message and unmeasured.

The fix is not two sets of collateral. It is one narrative, built from what both buyers actually ask on calls, that a rep can use in either room without switching decks.

What I have already run, on a technical product

At **Sensata**, the new sensing-product launch had to read for OEM engineers who could spot a padded spec sheet and for the distributors who only cared whether the part sold, on the same launch.

I turned those specs into one positioning narrative, drove **\$2M+ in first-year revenue** and a **15% conversion lift**, then built the enablement (decks, case studies, competitive one-pagers) that made it usable in the field for 50+ reps.

That split is the same shape as IT leader versus line-of-business owner, just in a different industry.

Sigma Apps is asking for a PMM who understands both sides of the enterprise software conversation and writes one story for the field. I have run that exact split, at \$2M+ scale.

What the Sr. PMM, Sigma Apps opening asks for, and where the proof sits.

What the role covers

- "Develop and maintain positioning and messaging for Sigma Apps including no-code app building, AI-assisted workflow automation, embedded analytics, and apps built with external coding agents."*
- "Partner with sales reps and the Enablement team... sharpen messaging, update battlecards, and improve enablement materials."*
- "Build and maintain competitive analysis and battlecards for the no-code/low-code, embedded analytics, and enterprise application development space."*
- "Experience with win/loss analysis, customer interviews, and translating buyer insights into sharper messaging."*

My Proof

- Dual-audience positioning:** turned deep technical specs into buyer-ready value stories for OEM engineers and distributor business owners on the same sensing-product launch, driving \$2M+ first-year revenue.
- Sales enablement reps use:** built decks, case studies and competitive one-pagers for 50+ reps at Sensata, improving win rates 30%.
- Competitive tracking and battlecards:** tracked competitor positioning across EMEA and the US, feeding differentiation directly into launch and campaign briefs.
- Win/loss and customer interviews:** ran 30+ structured interviews with OEMs and distributors, synthesizing win/loss insight into messaging that raised CSAT 22%.

The sensing-product launch: **one narrative, two buyers, a revenue number.**

Owned end-to-end GTM (positioning, pricing, channel, launch) for new sensing products across North America and Europe: the same scope this role owns for Sigma Apps across no-code building, workflow automation and embedded analytics.

\$2M+

First-Year Revenue

From a launch positioned for both the technical evaluator and the business buyer, not written twice.

+15%

Conversion on Priority Launches

From rewriting dense specs as buyer value, the same translation Sigma Apps needs for IT versus line-of-business.

+30%

Win Rate, 50+ Reps

From enablement built on real field feedback, not a guess at what a technical buyer wants to hear.

Today at Applied Materials, I automate the repetitive half of competitive and market analysis with AI agents built on Claude, the same instinct behind turning a manual battlecard refresh into a system that stays current.

What the first month on Sigma Apps PMM looks like.

WEEK 1

Learn the product and the field's language

Sit with the Director of Product Marketing, Apps, Product and a sample of reps to walk no-code app building, AI-assisted workflow automation and embedded analytics end to end, plus the battlecards in current use.

Why first: the same instinct that had me run 30+ customer interviews at Sensata before touching a single deck.

WEEK 2-3

Refresh one battlecard from real win/loss

Pull recent win/loss data and rep feedback for one competitive matchup in the no-code/low-code space, rewrite the battlecard and comparison from what reps actually hear on calls, and ship it for field use.

Why now: the same enablement discipline that lifted Sensata's win rate 30% across 50+ reps.

WEEK 4

Ship one dual-audience proof point

Turn one customer story into a case study that reads for both the IT buyer and the business owner, the same structure that carried the Sensata launch to \$2M+ in first-year revenue.

Why this fast: a credible dual-audience narrative only lands once someone has written one, not just planned to.

CLOSE

You are hiring someone to write one story for two buyers and arm the field with it. I have already run that loop, at \$2M+ scale.

The core proof is Sensata: **\$2M+ in first-year revenue** from a GTM launch positioned for OEM engineers and distributor business owners at once, a **15% conversion lift** from rewriting specs as buyer value, and sales enablement that lifted win rates **30% across 50+ reps**, all grounded in 30+ structured customer interviews.

What carries that proof into Sigma Apps is the habit underneath it: win/loss analysis, competitive tracking and AI-agent-automated analysis I run daily as Strategic Marketing III at Applied Materials, applied to a product built on the same AI-native instinct Sigma is selling.
