Hiring Team, Google

The brief behind this Product Activation Manager role asks someone to turn AMER launch feedback into roadmap recommendations without waiting a full quarter to act on it. At Sensata, I ran 30+ interviews with OEMs and distributors across North America and Europe and converted that field input directly into the roadmap and segmentation calls regional teams executed against, work that helped the GTM for our new sensing products land $2M+ in first-year revenue.

The same discipline runs the market read I do now at Applied Materials, where Sales, Engineering and Accounts input gets folded into one view before resourcing and launch decisions get made on it. At Sensata I carried that further into the FY2026 Bleeders and Leakers program: ranking 1,200 pricing opportunities across 3 regions and 20 product lines, then surfacing $433M in margin gaps that leadership used to decide where to focus instead of debating it in a meeting.

My take on go-to-market work for something like Shorts, Live or a GenAI feature is that the regional read matters more than the global one, because a launch plan that is right for the US and wrong for Brazil is still wrong. That is the muscle I built coordinating positioning, pricing and channel with regional teams at Sensata, and it is why I build my own models in SQL and Power BI instead of waiting on someone else's dashboard. I also automate the repetitive side of that analysis with AI agents built on Claude, so tracking a fast-moving AI product landscape is already how I work, not something to pick up after joining.
