Hiring Team, Glean

At Pixis I carried P&L on an 8-client, $15K-$90K/month AI ad-platform portfolio and cut churn 50% through account-based retention strategy and channel diversification, then used Amplitude and Tableau across 30+ campaigns to push ROAS up 40% more broadly. That is the same muscle your posting describes: turning first-touch curiosity into durable, expanding usage, not a one-time win.

Zero-to-one is not theoretical for me either. I wrote the PRD, scoped the MVP and designed the onboarding flow for SwipeHire, an AI job-matching platform, then ran 8+ activation experiments instrumented through GA4/GTM that lifted first-session activation 25% for its first 50+ users. That is the granular layer your posting asks for: specifying how onboarding should actually behave, not describing it from a deck.

The lifecycle and off-surface instincts carry over from the rest of my background. At Sensata I built the KPI frameworks in SQL and GA4 that turned 50,000+ connected devices into high-intent adoption cohorts, and at Plug Power I automated the lead-to-lifecycle flow end to end, cutting cost per lead 50%. At Applied Materials I now automate the repetitive side of my own forecasting with AI agents built on Claude, so I already work inside the kind of AI-first habit this role is asking a candidate to spread to Glean's customers.

Glean's users are not looking for a growth email, they are looking for an answer wherever they already work, which is exactly the off-surface, loop-building problem I want to own next. Proof trail at adhi-growth-ai.vercel.app/ref/glean.
