Hiring Team, BitGo

Your posting draws a hard line between a launch someone drove and one they supported. At Sensata, I owned GTM end to end, positioning, pricing, channel and launch, for a new sensing product line across North America and Europe, and it closed the year at $2M+ in revenue with qualified leads up 35%. That is the kind of ownership I would bring to how BitGo decides what a new product means and how it reaches the market.

The hardest part of that launch was not the plan, it was getting the story right before anyone saw it. I ran competitive benchmarking across 10+ players and 30+ structured interviews with OEMs and distributors before a line of messaging was written, and that discipline is what finding the simplest, sharpest articulation of a complicated product actually takes. I would apply the same process to turning custody, staking and settlement into the one-sentence pitch your posting is asking for.

I am used to being the connective tissue your posting names. At Applied Materials I pull Sales, Engineering and Accounts into one market view instead of waiting for someone to hand it to me, and at Sensata I turned 30+ customer conversations into a 22-point CSAT gain because nobody else was going to ask the questions first. Ambiguity does not slow me down; it is usually where I start.

On the AI-forward piece, it is already how I work: I automate recurring competitive and market analysis with agents built on Claude so the research hours go into sharper positioning instead of rebuilding the same report every cycle. I also agree with the premise behind the onsite Palo Alto setup. I would rather be in the room with Product and Sales working out a narrative than iterating on it over Slack. Proof trail at adhi-product-ai.vercel.app/ref/bitgo.
