Hiring Team, rkivecity

Your posting asks for someone who turns "Objective, Action Items, Owner, Deadline, Status, Blocker, Next Step" into the actual discipline behind every project, not just a template someone fills in once. That is the exact shape of PriceKeel, the company I run myself: I built its CRM, CPQ and deal-approval process from zero because nothing like it existed yet, and I run pilot customers and investor conversations for our first round in parallel, closing each thread myself because there is no one else to hand it to.

The business-MIS half of the role is where I have the clearest proof. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target across 3 regions and 4 product families, with win rate, stage distribution and regional scorecards that surfaced $433M in margin gaps for leadership to prioritize. That is the same job your posting describes: collect information from the people who own it, validate it, and turn a pile of numbers into the handful a founder can actually act on.

The follow-up discipline behind the tracker matters as much as the tracker itself. At Applied Materials I turn scattered input from Sales, Engineering and Accounts into one market view and carry P&L and revenue targets while running the OKR cadence behind it. At Pixis I hired and managed an 8-person team running 8 client accounts, chasing updates, unblocking vendors and flagging what was falling behind before anyone had to ask. Excel and Sheets work sits underneath all of it; I do not treat a tracker as finished until someone acts on what it shows.

What I would bring on day one is the pattern every stop above shares: build the tracker, validate the data behind it, and make sure the work it points to actually gets done, not just logged. Proof trail at adhithyabhaskar.vercel.app/ref/rkivecity.
