Hiring Team, Kraftshala

At Sensata I was handed a feature backlog of 100+ items slipping across 3 regions, with no one fully sure why. No playbook, no single owner, just a system getting worse as it scaled. I traced it to how the roadmap was being sequenced against engineering capacity, rebuilt the Agile process around it, and cut time-to-market 20%. That is the exact shape of problem Kraftshala's Founder's Office is describing: nobody hands you the fix, you have to find it and then make it stick.

I have run that loop at both ends of the org chart. As Pricing Lead at Sensata I structured AP26 revenue models and site-transition strategy directly with senior executives, then ran the Bleeders and Leakers program: fast, targeted pricing experiments, read the results, moved on to the next underpriced deal, and recovered $700K in margin in two quarters. At Applied Materials now, I pull Sales, Engineering and Accounts into one market view without owning any of those teams, because the argument has to carry the room rather than a title. That is cross-functional influence without borrowed authority, which reads a lot like what you call Top Grading in the posting.

I am also building PriceKeel, so I know what it costs to take a genuinely unscoped problem (bad B2B discounts closing with no guardrail) all the way to a shipped system: product, CRM and CPQ setup, pilots, and the audit trail that turns a one-off judgment call into a process Finance can run without me. Decision memos, repeatable processes, and the discipline to keep moving when the first plan does not survive contact with real data, that is the operating rhythm I would bring to the CEO's agenda at Kraftshala, not just the one problem in front of me today.

What drew me to this specific role is the problem shape, not the job title: ambiguous, cross-functional, measured by whether the fix outlives me on the team. I would start by doing exactly what the posting asks, taking one of the admissions, training, placements or tech problems you already know is slipping, finding the root cause, and turning it into a plan with owners and a timeline. Proof trail at adhithyabhaskar.vercel.app/ref/kraftshala.
