Hiring Team, Stryker

Your posting lists six separate internal comp bands by level for this role, which told me more about how this product org actually runs than most job descriptions do. A lot of postings slap "Global" on a title and mean "US, with a dotted line to EMEA." A level-banded structure like that usually means the role genuinely spans regions and the org has already thought through what that scope is worth at each level. That is the kind of global product role I want, not the label.

I have run that scope before. At Sensata I owned GTM for a new line of sensing products across North America and Europe end to end: positioning, pricing, channel and launch, which drove \$2M+ in first-year revenue. I did not set that plan from a hunch. I ran 30+ structured interviews with OEMs and distributors to turn field pain points into testable hypotheses, then checked the results against SQL and GA4 data from 50K+ connected devices before committing engineering time, work that cut time-to-market 20% and lifted CSAT 22% on a 100+ feature backlog running in Agile across 3 regions.

I also carry the P&L side of product, not just the roadmap side. I led global pricing strategy for Sensata's Industrial BU, raising distributor and channel-partner margins from 53% to 61% in under two quarters and moving YoY revenue up 12%, and I carry P&L and revenue targets now at Applied Materials, where I automate the recurring market-sizing and forecasting work with AI agents built on Claude so the time goes into the calls that actually need a person. That same pattern, talk to the market, verify against data, own the number, is what I would bring to this req.

I would welcome 15 minutes to walk through where I fit. Proof trail at adhi-product.vercel.app/ref/stryker.
