Hiring Team, onsemi

Your posting asks for someone who can trace a cost change through to a pricing action that protects margin. I have already run that exact loop inside a semiconductor-adjacent industrial BU: at Sensata, I led global pricing for the Industrial BU and recovered $700K+ in margin in two quarters through the Bleeders and Leakers program, closing deals flagged by competitive-positioning gaps and documented willingness to pay. The same program raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution.

The BU-level scope here, keeping ASP and margin aligned across product lines while staying close to Pricing, Finance, Sales and Operations, is familiar territory. The Bleeders and Leakers dashboard I built tracked 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, and surfaced $433M in margin gaps for leadership to prioritize. I also shaped AP26 revenue models and multimillion-dollar customer quotes directly with senior executives, which is the same business-case and executive-summary work this role runs on price-increase programs and contract reviews.

What I think is a sharper match than it looks on paper is that I am inside a semiconductor company right now. As Strategic Marketing III at Applied Materials, I build competitive, value-based pricing and forecast demand inflection points for its semiconductor equipment business, and I automate the recurring pricing and margin analysis behind that with AI agents built on Claude. Two different semiconductor-industry employers, same instinct: watch the cost and competitive signal, then move the price before the margin erodes.

I would like to bring that instinct to AMG and ISG. Proof trail at adhi-pricing-ai.vercel.app/ref/onsemi.
