PITCH DECK | ONSEMI BU PRICING ANALYST

A BU pricing seat needs someone who already turns cost signals into a margin-protecting price. I have run that loop inside two semiconductor-industry employers.

ASP and competitive-positioning analysis, cost-and-margin pricing actions, and the dashboards and business cases that get Pricing, Finance and Sales to agree.

- **$700K+** in margin recovered in 2 quarters at an industrial-sensor BU
- **53% to 61%** distributor margin lift through repricing
- **$627M** pipeline, 1,200 opportunities, $433M in margin gaps surfaced
- **Currently inside a semiconductor company**, pricing its equipment business
- **Claude AI agents** automating recurring pricing analysis

WHY THIS DECK EXISTS

A BU pricing analyst role does not lack candidates who know pricing theory. It lacks someone who has already protected margin against real cost and competitive swings, twice, inside semiconductor-industry companies.

What a BU pricing seat runs into

ASP and demand trends move faster than a quarterly pricing review, so a cost change needs to turn into a recommended price action before margin erodes, not after.

The recommendation has to survive contact with Sales, Finance and Operations at once, in a business case and an executive dashboard, not just a spreadsheet.

Most pricing candidates have analyzed a market. Fewer have owned the BU-level P&L outcome when the price action was wrong.

What I have already run, at comparable scale

At **Sensata**, I led global pricing for the Industrial BU and recovered $700K+ in margin in 2 quarters, closing gaps a competitive and willingness-to-pay review surfaced.

At **Applied Materials** now, I build competitive, value-based pricing and inflection-point forecasts for a semiconductor equipment business, carrying P&L and revenue targets.

At **PriceKeel**, I built the guardrail logic that explains why a discount is or is not safe, the same judgment a cost-driven pricing action needs.

This req asks for ASP and competitive-positioning analysis, cost-driven pricing actions, business cases, dashboards, and cross-functional alignment across the BU, Pricing, Finance, Sales and Operations. That is the loop above, run on two different semiconductor-adjacent books of business.

THE REQ, MAPPED

What the BU Pricing Analyst opening asks for, and where the proof sits.

What the role covers

> *"Analyze product pricing, ASP trends and competitive positioning; monitor market, demand and supply for pricing risk."*

> *"Analyze cost changes and recommend pricing actions to protect margin; support price-increase programs and contract negotiations."*

> *"Build business cases and financial models, build dashboards and executive summaries, align Business Units, Pricing, Finance, Sales and Operations."*

My Proof

Bleeders and Leakers at Sensata: ASP and competitive-positioning analysis against a $627M target, surfacing $433M in margin gaps across 20 product lines.

$700K+ margin recovered in 2 quarters: cost-driven pricing actions closed through documented willingness-to-pay and competitive-gap analysis.

53% to 61% distributor margins: a price-increase program run through channel partners, the contract-and-quote side of this req.

AP26 revenue models and executive dashboards: built and presented alongside senior executives, aligning Pricing, Finance and Sales on the recommendation.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a BU-wide margin-protection program against a $627M book.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Gaps Surfaced

Ranked every pricing risk into one view instead of chasing anecdotes BU by BU.

$700K+

Margin Recovered in 2 Quarters

Closed through pricing actions grounded in competitive gaps and documented willingness to pay.

53% to 61%

Distributor Margin Lift

A price-increase program run through distribution, the contract and quote half of the same work.

The same seat carried AP26 revenue models and multimillion-dollar customer quotes alongside senior executives. The common thread: every case started from a cost or competitive signal and ended in a pricing recommendation leadership could act on.

FIRST 30 DAYS

What the first month on onsemi's AMG and ISG pricing desk looks like.

WEEK 1

Map ASP and margin by product line

Sit with Pricing, Finance and Sales to build one view of ASP trends and margin by BU, product line and region, the same first move that built the Bleeders and Leakers dashboard at Sensata.

Why first: a pricing action is only as good as the cost-and-margin view it is built on.

WEEK 2-3

Flag the first margin-risk cases

Pressure-test 2 to 3 live cost-change or competitive-positioning signals with Sales and Operations, and draft the business case for the first recommended pricing action.

Why now: building the recommendation against a real signal, not in a vacuum, is what made the 53% to 61% distributor gain hold at Sensata.

WEEK 4

Ship the first executive dashboard

Automate one recurring piece of the ASP or margin-tracking workflow, and present the first executive summary that aligns the BU, Pricing, Finance and Sales on the recommendation.

Why this fast: the same habit that keeps Claude agents running recurring pricing analysis at Applied Materials today.

CLOSE

You are hiring someone to protect margin across onsemi's business units. I have been protecting margin across a semiconductor-adjacent BU for a year, and I am inside a semiconductor company today.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through a BU-wide pricing program built against a $627M-opportunity Power BI pipeline.

What is harder to find is someone running that same discipline right now, inside the industry: at **Applied Materials**, I build competitive, value-based pricing for a semiconductor equipment business and automate the recurring analysis with Claude AI agents, and at **PriceKeel** I build the guardrail logic that explains a pricing decision to Finance.
