Hiring Team, Square

Your posting draws a hard line between a creative strategist who builds the audience-to-message-to-test loop themselves and one who hands it off to an agency and waits. I've run the first kind. At Pixis, I took a flat-performing fashion client and rebuilt the full funnel myself, shopping feed, smart bidding, creative refresh, lookalike expansion, and the combined test shipped 3x ROAS the next month. No brief handed to a vendor; I wrote the hypothesis, built the test, and read the result.

The part of your role I keep coming back to is the self-serve, AI-enabled creative model, because I already operate that way. At Applied Materials I use Claude agents to automate the repetitive parts of my own market and forecasting analysis instead of asking a team for a tool. At Plug Power I rebuilt the WordPress and Pardot lead flow myself so landing page and email tests could ship without sitting in an engineering queue, which cut cost per lead 50% and raised organic visibility 35%. That is the same instinct your posting is naming: build the workflow, don't wait for it.

Messaging and audience work is where Sensata maps closest. I owned positioning for new sensor products, turning technical specs into value propositions that lifted launch conversion 15%, and ran 30-plus customer interviews with OEMs and distributors to find what the audience actually needed before we wrote a word of copy. At Plug Power, the same discipline applied to performance creative: customer research that reframed messaging lifted conversion 20% and cut CPA 15%, clear signal for what to scale and what to kill, which is exactly the kind of creative-versus-media-delivery read your posting asks for.

I'd bring that same build-test-synthesize loop to a defined Demand Gen portfolio at Square: own the messaging hierarchy, run the testing roadmap, and use AI tools to move faster through research, briefing and iteration, not to skip any of them. Proof trail at adhi-growth-ai.vercel.app/ref/square.
