Hiring Team, KLA

Right now I size the semiconductor manufacturing market for a living. At Applied Materials I build value-based pricing and inflection-point forecasting for a market moving faster than most pricing models can track. Your Broadband Plasma division sits at exactly that kind of inflection point, logic and memory customers pushing to advanced nodes faster than their inspection budgets catch up, and that is the market context I would bring straight into product marketing instead of pricing alone.

The go-to-market half of this role is the one I have already run end to end. At Sensata I owned launch strategy, positioning, pricing and channel for a new sensing product line across North America and Europe, closing the year at $2M+ in first-year revenue, then wrote the sales-enablement decks and case studies that moved win rates 30% across 50+ reps once the launch was live. That is the same sequence your posting describes: market analysis into positioning into content into a sales team that can actually sell it.

I also ran competitor and customer analysis across EMEA and the US at Sensata to find where purchasing patterns and competitor share were shifting, the kind of ongoing market research your posting asks for. And since I have hired and managed marketing teams at Plug Power and Pixis, mentoring junior product marketers is a role I have already played, not one I would be learning on the job.

KLA's inspection and metrology systems sit upstream of every chip built at advanced nodes, which is the kind of market I want my next product marketing seat inside. Proof trail at adhi-product-ai.vercel.app/ref/kla. Happy to talk whenever works on your side.
