PITCH DECK | KLA PRODUCT MARKETING MANAGER

Broadband Plasma needs a product marketer who already speaks the semiconductor manufacturing market's language, maps its competitive terrain, and turns NPI launches into enablement sales reps actually use. I run that exact sequence today.

Live semiconductor-market context plus a product marketing track record, on the same resume.

- **$2M+ first-year revenue** from an end-to-end NPI launch at Sensata
- **+30% win rate** from a sales-enablement system built for 50+ reps
- **10+-player benchmarking** behind a 12% YoY competitive price move
- **Live semiconductor market sizing** today at Applied Materials
- **AI agents built on Claude** automating my own recurring market analysis

WHY THIS DECK EXISTS

The role is not "write a launch deck." It is reading an inflection point in the semiconductor manufacturing market and turning it into positioning, content and enablement before the window closes.

What that actually requires

Market analysis and competitive-landscape assessment that is current, not a quarterly snapshot, because advanced-node demand inflects faster than a positioning doc can get stale.

Go-to-market plans for new product introductions built end to end: launch strategy, content, sales enablement and demand generation, not handed off piecemeal.

Collateral a technical buyer actually trusts, because logic, foundry and memory customers can tell when a datasheet is overselling the physics.

What I have already run

At **Applied Materials**, I size the semiconductor manufacturing market today and build value-based pricing that tracks demand inflection points as they happen, not after.

At **Sensata**, I owned go-to-market end to end for a new sensing product line, positioning through launch, closing the year at $2M+ in first-year revenue.

At **Sensata** again, I built the sales-enablement decks and case studies that moved win rates 30% for 50+ reps carrying a technical sale.

> **The through-line: I already read this market's inflection points for a living, and I already know how to turn that reading into a launch sales can carry.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Lead global product marketing strategy including market analysis, competitive landscape assessment, and customer segmentation."*

> *"Develop and manage go-to-market plans for new product introductions (NPIs), including launch strategy, content creation, sales enablement, and demand generation."*

> *"Conduct market research and analyze industry trends, customer needs, and competitive activities to identify new opportunities."*

My proof

Applied Materials, live market sizing: size the semiconductor manufacturing market today in partnership with Sales, Engineering and Accounts, turning field input into one view that informs pricing and strategy.

Sensata, NPI go-to-market: owned positioning, pricing, channel and launch for new sensing products across North America and Europe, driving $2M+ first-year revenue.

Sensata, market research and competitive intel: ran competitor and customer analysis across EMEA and the US, feeding a 12% YoY price realignment against 10+ competitors.

THE PROOF, IN DEPTH

Read the market, build the launch, then put a number on it.

Same pattern across a live semiconductor role and a prior NPI launch: read the market's inflection point, ship the positioning and enablement, then measure whether it moved a number the business was accountable for.

$2M+ Revenue

End-to-End NPI Go-to-Market

Positioning, pricing, channel and launch execution owned start to finish for Sensata's new sensing products.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Battlecards, decks and case studies built from scratch for a technical, multi-region sales team.

Live Market Sizing

Semiconductor Manufacturing, Today

Value-based pricing and inflection-point forecasting for process equipment at Applied Materials, in the same industry KLA sells into.

None of these was a positioning doc that sat in a folder. Each one closed the loop from market read to a number leadership could point to.

FIRST 30 DAYS

What the first month on the Broadband Plasma product marketing seat looks like.

WEEK 1

Read the competitive and customer landscape

Build the first logic, foundry and memory customer segmentation plus a competitive map against the optical-inspection landscape, so the first positioning move is built on where BBP actually wins, not a guess.

Why first: the same first move behind the EMEA/US competitive analysis at Sensata, map before you message.

WEEK 2-3

Ship the first NPI launch and enablement package

Build the first positioning brief, datasheet and case-study set directly with product management and sales, versioned as a reusable system for the next NPI instead of rebuilt per launch.

Why now: the same build that moved Sensata's win rate 30% instead of a deck no rep opened twice.

WEEK 4

Stand up the recurring market-intelligence loop

Institute the direct customer- and market-research discipline behind my current Applied Materials work, pointed at BBP's own accounts, then automate the reporting step with an AI agent so the read ships every cycle, not once a quarter.

Why this fast: the same habit that keeps my own market-sizing reporting moving today, not a plan for someday.

CLOSE

You are hiring someone who already reads the semiconductor manufacturing market for a living and already knows how to turn that read into a launch sales can carry. I have run both halves, with a number on each one.

The market half: **live semiconductor-market sizing and value-based pricing** at Applied Materials today, tracking the same kind of demand inflection points that drive advanced-node inspection budgets.

The launch half: **$2M+ first-year revenue** from an NPI go-to-market I owned end to end at Sensata, plus the sales-enablement system that moved win rates 30% for 50+ reps. I now automate my own recurring market analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next launch.
