Hiring Team, Instacart

Your posting says new products, pricing models and acquisitions are making every deal more complex, and that the Quote-to-Cash process needs to scale just as fast. That is the exact gap I have spent the last several months building a product around. As founder of PriceKeel, I set up and run the company's own CRM, CPQ configuration, forecast and pipeline reviews, and deal approvals end to end, the full Quote-to-Cash loop your Sales org needs to move through quickly and correctly.

The risk and compliance side is not new either. I built the audit trail at PriceKeel that records the human pricing decision with evidence Finance can audit, so a deal's terms are never a surprise after the fact. At Sensata I did the same work from the Sales side: reading multimillion-dollar customer quotes and AP26 revenue models for risk, and approving terms before signature, as part of the Bleeders and Leakers program that recovered $700K plus in margin in two quarters and raised distributor margins from 53% to 61%.

Scaling a new program from kickoff is also familiar ground. That same Bleeders and Leakers work became a BU-wide Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, the kind of structure a growing deal desk needs in place before volume arrives, not after. I have also sat on the cross-functional side of these deals, partnering with Sales, Engineering and Finance at both Sensata and Applied Materials to keep everyone working off one shared view of a deal.

I would bring the same discipline to Instacart's Sales-Finance-Tax-Legal intersection, built from owning both the deal and the system that books it. Proof trail at adhi-pricing-ai.vercel.app/ref/instacart.
