Hiring Team, ElevenLabs

At Sensata I built the Bleeders and Leakers Power BI dashboard: 1,200 opportunities tracked against a $627M target across 3 regions and 20 product lines, broken out by salesperson and product line so a coverage gap showed up before anyone had to ask about it. Your posting asks the Chief of Staff to track Enterprise Deployment's OKRs and flag issues or gaps in coverage early. That is the same job, pointed at a team's workload instead of a pricing pipeline.

I would bring the same instinct for organization to the Field CTO and Enterprise Deployment leads directly. I run PriceKeel's own CRM, CPQ and forecast and pipeline review cadence, plus the deal-approval workflow and audit trail Finance checks before anything ships. That is what "bring organization to this fast-growing team" looks like in practice: a standardized process that survives past the person who built it, not a system only one person can run.

Staffing people against geography, priorities, capacity and skills is a muscle I have used, not a job description I am reading for the first time. At Pixis I hired and staffed an 8-person team across 8 client accounts by capacity and skill fit while carrying P&L targets. At Sensata I went from Product and Growth Marketing to Pricing Lead in 10 months, built on the leadership decks and OKR reviews that made leads trust my read on where to point people next. At Plug Power I hired and managed the marketing team and got budget plans approved by leadership every quarter, so I know what it takes to walk into a team meeting with the numbers already lined up.

ElevenLabs runs AI first, from engineering to growth to operations, and I already work that way: as Strategic Marketing III at Applied Materials I automate the repetitive half of my own reporting with Claude AI agents so the time goes to the judgment calls, not the data pull. A Chief of Staff role with no fixed job title, measured on impact instead, is the kind of scope I want next. Proof trail at adhithyabhaskar.vercel.app/ref/elevenlabs.
