Hiring Team, Veeva Systems

Your Veeva Link posting asks for someone who can support go-to-market programs for new offerings and turn buyer needs into messaging the field can actually use. That loop is what I ran at Sensata: I owned the GTM for a new line of sensing products, positioning, pricing, channel and launch, end to end, and it drove \$2M plus in first-year revenue with a 35 percent lift in qualified leads.

The customer-story part of your list is the piece I like best. I ran 30 plus interviews with OEMs and distributors, the wins and the near misses both, and turned what I heard into case studies and product fixes that raised CSAT 22 percent. At Pixis I kept that case-study library current on an ongoing basis, not just after a launch, which is closer to what a growing product like Veeva Link needs week to week: proof that stays true instead of one that gets stale six months after the win.

I also built the sales-tools library 50 plus Sensata reps used against competitors, and win rates rose 30 percent once the field worked from one shared set of decks and competitive materials instead of five different versions of the same story. Now at Applied Materials I partner with Sales, Engineering and Accounts on market sizing, build the leadership decks that keep a technical product's narrative straight across teams, and use AI agents built on Claude to clear the repetitive research first so the writing time goes into the content that actually needs a human voice.

What I would bring to this role is a habit of shipping GTM content that survives contact with the field: positioning that holds up on a live sales call, stories sourced straight from the customer, and a sales-tools library nobody has to guess where to find. Proof trail at adhi-product.vercel.app/ref/veeva-systems.
