Hiring Team, Figma

I built and instrumented a sign-up funnel from a blank page once already: SwipeHire, an AI job-matching platform where I wrote the PRD, wired GA4 and GTM across the acquisition funnel, and ran 8+ A/B tests on the onboarding flow that lifted activation 25% for the first 50 users. Your posting talks about building experiments around logged-out and sign-up experiences, and that is close to the exact loop I already run.

At Plug Power I owned the acquisition side of the funnel directly: raised organic search visibility 35% by closing keyword-strategy gaps and building SEO partnerships, then ran 15+ paid-search and paid-social A/B tests that cut CPA 25%, all tied back to spend through a closed-loop Mar-Tech stack (Salesforce, Adobe Analytics, GA, Tag Manager). Turning traffic and search visibility into a number Finance trusts is the same muscle acquisition strategy needs, whether the channel is traditional search or the newer generative one your posting flags.

I also carry the roadmap-ownership side of the role. At Sensata I ran a 100+ feature backlog and a cross-functional roadmap with Engineering across 3 regions, grounding every call in 30+ customer interviews and SQL/GA4 cohort data instead of opinion, work that cut time-to-market 20% and lifted adoption 18%. And at Applied Materials now I build Claude-based AI agents to automate repetitive analysis, so the AI-powered product development trends your posting asks about are not new territory, they are how I already work day to day.

I would welcome 15 minutes to talk through where I would plug into req 2464. Proof trail at [adhi-product-ai.vercel.app/ref/figma](https://adhi-product-ai.vercel.app/ref/figma).
