Hiring Team, ElevenLabs

Your Enterprise PM post for ElevenCreative asks for someone who pulls pricing, packaging and GTM levers at once to move enterprise revenue and adoption, not someone who ships features in isolation. At Sensata, that was the job: I owned the sensor-product roadmap and a 100+ feature backlog across 3 regions, then built the Power BI price-increase model behind the pricing realignment that drove +12% YoY revenue alongside it.

I get to that roadmap by sitting close to sales and customers, not just a backlog. I ran 30+ interviews with OEMs and distributors, built sales enablement for 50+ reps to close the gap between field deal blockers and what we shipped (win rates up 30%), and tracked adoption, expansion and retention through SQL/GA4 KPI frameworks across 50K+ connected devices. Right now at Applied Materials, I automate that same kind of repetitive analysis with AI agents built on Claude, so more of the week goes to the roadmap calls that actually need judgment.

I also know what it takes to scope and ship something from zero. SwipeHire is an AI job-matching platform I shipped end to end: wrote the PRD, scoped the MVP, built eligibility-aware matching, and onboarded 50+ early users while owning the GTM and analytics stack that told me what to build next. That is the same instinct an enterprise product like Ads Engine needs: ship fast, then let usage data across accounts tell you what enterprise teams need next.

I would like to bring that roadmap-to-shipped-feature, pricing-and-packaging discipline to ElevenCreative's enterprise team. Proof trail at adhi-product-ai.vercel.app/ref/elevenlabs.
