

PITCH DECK | PARAFORM PRODUCT MARKETING LEAD

A recruiting marketplace only earns trust from both sides, recruiters and companies, when the category story and the launch proof both hold up. I built that exact motion from zero before.

An AI job-matching platform built PRD to positioning to pricing tiers, a \$2M+ product launch run end to end, and sales enablement that lifted win rates 30% for a 50-person team.

50+ early users - AI job-matching platform built zero-to-one, PRD to launch

3 pricing tiers - positioning and packaging modeled from competitor teardowns

GTM \$2M+ - Sensata sensing-product launch owned end to end

Win rates +30% - sales enablement built for a 50-person team

Claude AI agents - shipping AI-built workflows at Applied Materials today

A first PMM hire at a marketplace does not inherit a category narrative. They have to write it from a blank page while the launches keep shipping.

What that actually requires

A category narrative and positioning built for two audiences at once, recruiters submitting candidates and companies paying for hires, not one buyer persona reused twice.

End-to-end launch ownership: positioning, pricing, channel and sales enablement shipped together, not handed off between teams that do not exist yet.

Storytelling that survives contact with real users before it goes to sales, so the enablement built around it does not need a rewrite in month two.

What I have already built at that layer

Built **SwipeHire**, an AI job-matching platform, zero-to-one: wrote the PRD, defined the ICP, ran competitor teardowns and shipped the positioning behind 3 subscription pricing tiers.

Owned **GTM for Sensata's new sensing products** end to end (positioning, pricing, channel, launch) for \$2M+ in first-year revenue with no existing playbook to borrow.

Built the **sales enablement** (decks, case studies) that turned that launch into a sellable story for a 50-person team, lifting win rates 30%.

The through-line: I have written the category narrative for a two-sided marketplace before, not a single-buyer product, which is the actual hard part inside a first PMM hire at Paraform.

What the role covers, and where the proof already sits.

What the role covers

- Define the category narrative and own positioning for a complex, two-sided B2B SaaS product.
- Own product launches end to end and build the PMM function itself, from nothing.
- Build sales enablement and bring talent, recruiting or AI product launch experience.

My proof

- SwipeHire, zero-to-one:** built an AI job-matching platform's positioning, pricing tiers and GTM stack from a blank page, the direct talent-tech analog to this mandate.
- Sensata, GTM \$2M+:** owned a full launch cycle, positioning through channel, with no existing team or playbook to lean on.
- Sales enablement, win rates +30%:** built the decks and case studies that made the launch sellable for a 50-person team.

SwipeHire: a job-matching marketplace built from a blank page, not a template.

Built as an AI job-matching platform for job seekers, the same two-sided candidate-to-opportunity dynamic a recruiting marketplace runs on, from PRD through pricing to launch.

50+ Users

Early Adoption, Zero-to-One

Wrote the PRD, scoped the MVP and shipped auto-tailored resumes and visa-aware matching.

3 Tiers

Pricing & Positioning Modeled

Defined the ICP and ran competitor teardowns (Jobright and others) to set the category story.

+25% Activation

From 8+ A/B Tests, 12+ Interviews

Ran the GTM and analytics stack (GA4, GTM, funnel dashboards) to test the story against real users.

The same end-to-end discipline carries over from Sensata, where I owned GTM for a new product line (positioning, pricing, channel, launch) for \$2M+ in first-year revenue, and from Applied Materials, where I automate the repetitive side of that work with Claude AI agents today.

What the first month building Paraform's PMM function would look like.

WEEK 1 Sit on both sides of the marketplace Talk to recruiters and hiring companies before drafting a word of narrative, the same ICP-first move that shaped SwipeHire's positioning before launch. ----- Why first: a category narrative built for one side of a marketplace collapses the first time the other side reads it.	WEEK 2-3 Draft the category narrative, then stress-test it Write the positioning, then run it past real prospects the way SwipeHire's 8+ A/B tests and 12+ interviews validated messaging before it shipped. ----- Why now: a narrative nobody has argued with yet is a guess, not a category.	WEEK 4 Ship the launch and the enablement together Turn the tested narrative into the first launch plus the sales decks and case studies behind it, the same pairing that lifted win rates 30% at Sensata. ----- Why this fast: a PMM function earns its seat when the first launch and the first enablement kit land at the same time.
---	--	---

CLOSE

Paraform needs a first PMM hire who has already written a category narrative for a two-sided marketplace, not adapted one from a single-buyer product. I have.

The core proof is SwipeHire: an [AI job-matching platform](#) built zero-to-one, PRD through positioning through 3 pricing tiers, tested against real users before it ever reached a sales conversation.

What is harder to find is someone who has also owned a full launch cycle end to end at Sensata for \$2M+ in revenue, built the sales enablement that made it sellable, and keeps shipping with AI tools today, automating repetitive analysis with [Claude agents](#) at Applied Materials.
