PITCH DECK | GOOGLE STRATEGY AND OPERATIONS LEAD, GBAI OPERATIONS

# GBAI Product Operations needs one person who can turn an ambiguous sales-tools question into a reporting framework Director-level stakeholders act on, then keep the cadence running. I already run that loop end to end.

*Cross-functional initiative ownership, executive stakeholder alignment and operating-cadence discipline from someone who builds the framework and runs the review, not just one or the other.*

- **$433M** in margin gaps surfaced for leadership via a 1,200-opportunity reporting framework
- **+8% market share** from a benchmarking recommendation turned into execution
- **AP26 revenue models** and multimillion-dollar contracting run directly with senior executives
- **8-client, $15K-$90K/mo** advertiser portfolio, the GBO customer side of this org
- **Claude AI agents** automating recurring reporting work at Applied Materials

WHY THIS DECK EXISTS

# A sales-tools strategy org is really two disciplines held by one person: the operational data that finds the insight, and the cadence that makes it stick for Director+ stakeholders.

### What losing that discipline runs into

A strategy function that only produces a recommendation does not fail loudly. It fails as a plan nodded through in one review with a Director-level stakeholder, then quietly abandoned next quarter because no reporting cadence existed to check on it.

GBAI sits between global product leads, engineering, legal, compliance and finance, so a gap in process design or stakeholder alignment becomes everyone's guessing game at the next business review, not just one team's problem.

The fix is not another one-off analysis. It is someone who treats insight generation, reporting-framework design and executive alignment as one connected discipline.

### What I have already run

At **Applied Materials**, I align Sales, Engineering and Accounts into one strategic view, then own the business operations cadence, OKRs, annual target setting, weekly and quarterly business reviews, across multiple product groups.

At **Sensata**, I designed the Bleeders and Leakers reporting framework that made 1,200 pricing opportunities actionable, then carried that same discipline into AP26 revenue models and contracting directly with senior executives.

Both mean I have sat on the insight-generation side and the stakeholder-alignment side of this exact loop, not just one.

**A Strategy and Operations Lead who drives complex cross-functional initiatives end to end, designs reporting frameworks, and builds a network across Director-level stakeholders is describing this exact loop: structure the ambiguity, build the process, keep every function aligned behind it.**

THE REQ, MAPPED

# What the Strategy and Operations Lead opening for GBAI Operations asks for, and where the proof already sits.

## What the role covers

> *Lead and drive complex, cross-functional strategic initiatives end to end with limited guidance, managing scoping, planning, priorities and milestones.*

> *Deconstruct highly ambiguous situations, drawing on a wide toolkit to deliver data-driven recommendations.*

> *Build a broad network of relationships including Director-level stakeholders, align resources, build consensus, drive change management.*

> *Design reporting frameworks and analyze operational data to surface actionable insights and empower executive decision-making.*

## My Proof

**Complex initiatives, end to end:** designed the FY2026 Bleeders and Leakers reporting framework at Sensata, ranking 1,200 opportunities across 3 regions and 20 product lines against a $627M target, start to finish, with limited oversight.

**Structuring ambiguity into a recommendation:** benchmarked 10+ competitors and turned the read into a GTM recommendation that drove +12% YoY revenue and +8% market share.

**Director-level stakeholder network:** shaped AP26 revenue models and multimillion-dollar customer contracting directly with Sensata's senior executives; presented customer-research plans to the leadership team for approval at Plug Power.

**Reporting frameworks, operational data, executive decisions:** run the OKRs and weekly and quarterly business reviews behind P&L and revenue targets at Applied Materials today, the operating cadence this seat needs to own.

THE PROOF, IN DEPTH

# Bleeders and Leakers: make every pricing opportunity visible before leadership sets the next target.

Designed as a BU-wide reporting framework covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view checked before leadership set the next quarter's priorities, the same operational-data-to-insight loop GBAI runs for sales tools.

## $433M

**Margin Gaps Surfaced**

Every gap traced to a specific record by salesperson and product line, the same segment-level detail a Director-level business review needs to act instead of debate.

## +8%

**Market Share Gained**

10+ competitors benchmarked, then turned into a recommendation that drove +12% YoY revenue alongside it, the insight-to-execution step this role owns.

## 53% to 61%

**Distributor Margin Lift**

Renegotiated the channel contracting logic and documented the process so the cadence held past the first quarter, not just the one review it was presented in.

That same instinct runs the Applied Materials seat today: align Sales, Engineering and Accounts into one view, then keep the OKRs and quarterly business reviews current so the plan does not go stale after the first meeting.

FIRST 30 DAYS

# What the first month inside GBAI Product Operations looks like.

WEEK 1

## Map the stakeholders and the current sales-tools cadence

Sit with the GTM Operations team, Sales, Legal and Compliance to learn how a sales-tools decision currently moves from operational data to a Director-level call, and shadow one existing business review end to end before touching anything.

**Why first:** the same instinct that had me learn Applied Materials' Sales, Engineering and Accounts loop before building anything on top of it.

WEEK 2-3

## Own one cross-functional initiative end to end

Take one ambiguous, multi-stakeholder question, structure it with limited guidance, and present a data-driven recommendation to a Director-level stakeholder, the same loop that turned the Bleeders and Leakers analysis into a leadership decision at Sensata.

**Why now:** the fastest way to earn trust on an unfamiliar system is to ship one complete recommendation, not a slide of open questions.

WEEK 4

## Stand up the reporting framework

Propose the recurring review that keeps that recommendation alive: who owns it, how often operational data gets checked, and what triggers a revisit, mirroring the weekly and quarterly reviews already running at Applied Materials and Sensata.

**Why this fast:** a cross-functional initiative only earns its keep if a cadence exists to re-check it every cycle instead of trusting the first readout.

CLOSE

# You are hiring someone to turn sales-tools ambiguity into one reporting framework Director-level stakeholders trust. I have already built that discipline, from the analysis side and the alignment side.

The core proof is Sensata: a reporting framework tracking **1,200 pricing opportunities against a $627M target**, $433M in margin gaps surfaced for leadership, and a competitive-benchmarking recommendation that drove **+8% market share**.

What is harder to find is someone who has also sat on the advertiser side the business this org enables serves: I carried P&L targets for an **8-client, $15K-$90K per client per month advertising portfolio** at Pixis. The analysis, the cadence and the advertiser's view are not three separate skills I would need to learn on the job.
