Hiring Team, Delta Electronics Americas

Your posting asks for someone who can move past collecting information and into market size, TAM/SAM/SOM, and competitive gaps that hold up in an executive briefing. I built exactly that model for Safran: a TAM/SAM/SOM analysis that took a facility list of 170 down to a defensible SAM of 28, with 10+ competitors assessed for market-entry feasibility, presented directly to Safran's leadership team.

That same discipline is what I run day to day now. At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts, synthesizing field and technical input into one view that keeps pricing paced to demand. At Sensata I benchmarked competitive pricing across 10+ key players and built the FY2026 Bleeders and Leakers Power BI dashboard, surfacing \$433M in margin gaps for leadership and recovering \$700K+ in margin in two quarters, work I presented straight to senior executives alongside AP26 revenue models and site-transition strategy.

The research-to-recommendation loop your role description lays out, track competitors, size the market, synthesize the research, turn it into a briefing a VP can act on without a follow-up meeting, is the loop I run on industrial BUs worth multiple hundred million dollars at Sensata and on a fast-growing semiconductor market at Applied Materials. That rigor carries across to power electronics and datacenter infrastructure faster than the underlying technology changes.

Delta's two parallel analyst searches, one in datacenter power and cooling and one in energy infrastructure and microgrids, tell me the company is scaling intelligence capacity ahead of demand rather than reacting to it. I would like to be one of the two. Proof trail at adhithyabhaskar.vercel.app/ref/delta-electronics-americas.
