Hiring Team, Revspot

Your posting asks for someone who can "anticipate risks, resolve bottlenecks, and make informed decisions with incomplete information." That is the exact job I already do at PriceKeel, the B2B SaaS pricing company I founded: I am the only operator, so every ambiguous problem across product, pilots and fundraising lands on my desk and I am the one who turns it into a plan with an owner and a deadline, because there is no one else to hand it to. A Chief of Staff seat is the same instinct pointed at someone else's company instead of my own.

I also carry that instinct inside a much larger organization. At Applied Materials I close the gaps between Sales, Engineering and Accounts, turning scattered input into one market-sizing view leadership can act on, and I run the OKR cadence behind weekly and quarterly business reviews so cross-functional owners stay accountable without me chasing them. At Sensata I sat close enough to the executive team to build the AP26 revenue models and site-transition strategy myself, then independently drove the Bleeders and Leakers program from problem definition to a negotiated outcome that recovered $700K plus in margin in two quarters. Both jobs required getting people outside my own function to act on a plan I had built, which is the actual test behind "align teams around business priorities and hold owners accountable."

On the hiring and org-building side: I have hired and managed teams end to end, from an 8-person account team at Pixis carrying its own P&L to the team behind my own SwipeHire product, where I also wrote the PRD and scoped the MVP myself. And on the "AI-powered revenue engine" framing specifically, I already run Claude agents to automate the repetitive research and reporting in my own day job, the same kind of leverage a founder needs from whoever is running their time for them.
