Hiring Team, Freshworks

Your posting asks for someone who can turn buyer signals into GTM automations, not just talk about AI. I already run that loop: I founded PriceKeel, where I built the CRM, CPQ, forecast and deal-approval workflows myself, and on top of them a guardrail engine that scores every discount exception against the company's own closed-won and closed-lost deal data. That is the same signal-to-action work your team wants applied to lead routing, scoring and account prioritization.

I have shipped that kind of system outside a day job, too. SwipeHire is an AI job-matching platform I built zero to one on the OpenAI API, wiring auto-tailored resumes and visa-aware matching logic into a live product, and I own the GTM and analytics stack that feeds it (GA4, event tracking, funnel dashboards). At Sensata, I built the Power BI pipeline analytics that 1,200 opportunities and a \$627M target ran through, win rate, \$/win and stage distribution by salesperson, the pipeline-prioritization view a RevOps team lives in. At Plug Power, I automated the WordPress and Pardot lead flow and the Mar-Tech stack around it (Salesforce, Adobe Analytics, GA, Google Tag Manager), cutting cost per lead 50% by removing the manual handoff between web capture and CRM.

Right now, as Strategic Marketing III at Applied Materials, I automate repetitive market and competitive analysis with AI agents built on Claude, which is the literal ask in your required qualifications. I am not new to building with LLMs on top of a GTM stack; it is what I already do, and PriceKeel is the proof I would rather build the automation than describe it.

I would like to bring that same builder's instinct to Freshworks' GTM engineering team. Proof trail at adhithyabhaskar.vercel.app/ref/freshworks.
