PITCH DECK | SNOWFLAKE SR PMM, MEDIA, ENTERTAINMENT AND ADVERTISING

Orchestrating GTM across regions and personas, enabling the field at scale, and translating platform value into business value: three things I already do in one Applied Materials forecasting seat, not three separate jobs.

Field enablement that moved win rates, global launches that held up across regions, and a Claude-run forecasting practice built to scale program execution without scaling headcount.

- **50+ reps** equipped with enablement material that lifted win rates 30% at Sensata
- **$2M+** first-year revenue from a GTM launch aligned across North America and Europe
- **8-client portfolio** running retail-media and performance programs at Pixis, persona by persona
- **Claude AI agents** acting on market analysis and forecasting at Applied Materials, not just reporting it
- **30+ customer interviews** surfacing regional insight that reshaped a product roadmap

WHY THIS DECK EXISTS

Your posting asks for one person who can scale global programs, amplify regional priorities, and still make the message land with Media leaders. Most GTM careers only build one of those three.

Where that breaks for most candidates

A GTM program that works globally often loses the regional nuance that makes it land with a specific persona. A regional specialist, in turn, rarely has the cross-functional reach to scale a program past their own patch.

Media, Entertainment and Advertising buyers in particular notice when a platform pitch has not been translated into their own business language, not a generic data-platform pitch recycled across verticals.

The fix is not more content. It is one person who has actually run the regional-to-global loop before, not just briefed it to a field team.

What I already run

At **Sensata**, I drove GTM for new product launches across North America and Europe, aligning global launch strategy to regional execution on the ground, the same loop this role calls orchestration.

At **Pixis**, I ran persona-by-persona retail-media and performance programs across an 8-client portfolio in international, non-English markets, each with its own P&L target.

Both sides mean I have sat in the global-plan seat and the regional-execution seat on the same program, not just handed one to the other.

Co-owning MEA strategy, running big-bet campaigns, enabling the field at scale, translating platform value into business value: that is one connected loop. Set the plan, enable the team, prove the outcome.

THE REQ, MAPPED

What the Sr PMM, Media, Entertainment and Advertising opening asks for, next to where the proof already sits.

What the role covers

> *Co-own and align MEA persona strategy, ensuring plans reflect customer insight and empower the field to execute with impact.*

> *Develop and execute "big bets": net-new integrated campaigns and targeted sales plays that accelerate adoption.*

> *Enable the field at scale with programs, sales plays and messaging that drive pipeline and revenue outcomes.*

> *Translate platform value into business value statements that resonate with MEA decision-makers.*

My Proof

Persona strategy and customer insight: ran 30+ customer interviews with OEMs and distributors at Sensata, surfacing regional insight that reshaped the roadmap and lifted CSAT 22%.

Big-bet campaigns: drove GTM for new sensing-product launches across North America and Europe at Sensata, positioning, pricing and channel together, for $2M+ first-year revenue.

Field enablement at scale: equipped 50+ reps with decks, case studies and sales plays they used unchanged in the field, lifting win rates 30%.

Translating value for decision-makers: at Applied Materials, aligns market sizing across Sales, Engineering and Accounts, and translates technical capability into value-based pricing and business-value statements for decision-makers.

THE PROOF, IN DEPTH

Field enablement at Sensata: material reps used unchanged, because it was already built from the regional insight they needed.

Built from 30+ customer interviews with OEMs and distributors across regions, the enablement kit (decks, case studies, sales plays) went straight into the field without local rework, because the regional voice was already in it.

30%

Win Rate Lift

Across 50+ reps who used the enablement material as delivered, the same field-scale outcome this role's "enable the field" pillar asks for.

$2M+

First-Year Launch Revenue

A new sensing-product launch aligned across North America and Europe on positioning, pricing and channel together, not sequenced region by region.

22%

CSAT Lift From Customer Insight

Regional interview insight fed back into the roadmap, the same translation this posting asks for between field signal and global direction.

At Applied Materials, that same regional-to-global discipline now runs on Claude AI agents that act on market and forecasting analysis directly, so the translation from technical capability to business-value statement happens faster, not slower, as the program scales.

FIRST 30 DAYS

What the first month orchestrating MEA GTM at Snowflake looks like.

WEEK 1

Map the MEA persona and account landscape

Sit with Account teams, Field Marketing, Technical Sales and Industry specialists to learn the current MEA messaging, sales plays and the "big bets" already in flight, and shadow one live cross-functional working group end to end.

Why first: the same groundwork that had me run 30+ customer interviews at Sensata before touching the roadmap.

WEEK 2-3

Ship one field-enablement asset against a live sales play

Take one MEA sales play already in motion and ship enablement (messaging, business-value statement, case study) a rep can use unchanged this quarter, then track it against pipeline and revenue outcomes.

Why now: the same build-it-so-the-field-can-use-it-as-is discipline that lifted Sensata win rates 30%.

WEEK 4

Scope one net-new "big bet" integrated campaign

Identify one net-new campaign opportunity for a priority MEA sub-vertical, write the regional-to-global alignment plan, and bring cross-functional working groups in before execution starts.

Why this fast: a big bet only earns its name if the cross-functional alignment is set before launch, the same order Sensata's cross-region launches ran in.

CLOSE

You are hiring someone to make global MEA programs land with a specific regional buyer, not just scale past them. I have already run that loop, from both sides.

The core proof is Sensata: enablement that **50+ reps used unchanged** to lift win rates **30%**, a cross-region launch worth **$2M+ in first-year revenue**, and 30+ customer interviews that fed regional insight back into the roadmap.

What is harder to find is someone who has also run that same persona-by-persona discipline internationally. **I built that at Pixis**, running retail-media and performance programs across an 8-client portfolio in non-English markets, so the regional amplification this role asks for is not something I would need to learn on the job.
