Hiring Team, Amazon Web Services (AWS)

An enterprise IT admin evaluating Amazon WorkSpaces has usually been burned by a desktop migration before, so the positioning that wins is not the one that talks fastest about the cloud, it is the one that survives the skeptical follow-up questions. At Sensata, I built the KPI frameworks myself, in SQL and GA4, across 50,000-plus connected industrial devices, then wrote the positioning that turned those technical specs into a case an OEM engineer could defend to his own VP, lifting conversion 15% on priority launches. That is the same buyer AWS is marketing to here: someone who reads past the headline straight to the fine print.

Direct evidence of fit:

- Owned end-to-end GTM for a new Sensata product line across North America and Europe, positioning, pricing, channel and launch together, driving \$2M+ first-year revenue and +35% qualified leads.
- Ran 30+ structured discovery interviews with OEM and distributor buyers, feeding insights that raised CSAT 22% and shaped the launch roadmap.
- Built the sales enablement library, decks, case studies and battlecards, used by 50+ reps, lifting win rates 30% against entrenched incumbents.
- Drove +12% YoY revenue and +8% market share through competitive benchmarking and pricing calls briefed directly to senior executives.

AWS is asking for someone who can turn a technical infrastructure product into buyer language without watering it down, which is the exact translation I run in my current role as Strategic Marketing III at Applied Materials: building value-based pricing for a fast-moving semiconductor market and automating the repetitive side of that analysis with Claude AI agents so the strategic work gets more of my time, not less. I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, on the side, which keeps me close to how technical buyers actually make a purchase call.

I would like to bring that technical-buyer track record to Amazon WorkSpaces. Proof trail at adhi-product-ai.vercel.app/ref/aws if you want to see the launch and enablement work firsthand.
