Hiring Team, Stripe

At Sensata I turned a 100+ feature backlog into a sensor platform that shipped 25% faster, the same job Connect's primitives need: take a fast-changing set of user needs and turn them into something durable across products, industries and regions. I met with 30+ OEMs and distributors to find where the platform broke for them, then fed that back into the roadmap and watched CSAT move 22%.

SwipeHire is the build that shows I can move a roadmap past the whiteboard myself: I wrote the PRD, scoped the MVP, and built the AI job-matching platform in Python and the OpenAI API, then shipped it to 50+ real users. I priced its three subscription tiers off competitor benchmarks and willingness-to-pay data, then ran 8+ A/B tests that lifted activation 25%. That is the same build-it-and-price-it loop a Connect PM runs on marketplaces and software platforms, just smaller.

The cross-functional coordination is familiar too. As Pricing Lead at Sensata I drove 12% YoY revenue and 8% market share through price realignment informed by competitive benchmarking across 10+ key players, and at Applied Materials I size markets with Sales, Engineering and Accounts and present the forecasting models to leadership for feedback before they ship. Stripe's Connect sits at the center of marketplaces, platforms and the parties they route value between; I am the person who turns what those different teams need into one plan and then stays in the room until it ships.

I would welcome the chance to talk about where Connect's roadmap is headed next. Proof trail at adhi-product-ai.vercel.app/ref/stripe.
