Hiring Team, Commure

Your posting asks one person to own the full numbers side of the sales motion for Call Center Agents: pipeline, forecast, targets, rep performance. That is close to what the FY2026 Bleeders and Leakers program at Sensata required of me. I built a Power BI scorecard that ranked 1,200 opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with one win-rate and stage-conversion view surfaced by salesperson instead of a dozen conflicting spreadsheets, the same CRM-hygiene and KPI-definition work you want someone to own here.

The enablement half of this role matters just as much, and I have already run it at scale. I trained and certified 50+ reps on sales enablement content every time a Sensata product line shipped something new, lifting win rates 30%, the same retrain-on-every-release motion this role needs as Call Center Agents ships new capability every few weeks.

I run the systems side of this today at PriceKeel, where I set up and operate the company's own CRM and CPQ, deal-stage definitions, forecast and pipeline reviews, and deal approvals, and built the audit trail Finance can point to for every discount call. At Applied Materials I build forecasting and market-sizing models across multiple product groups and keep automating the recurring parts of that work with Claude AI agents, the same instinct to move the reporting machine off spreadsheets that your posting calls out directly.

Selling Call Center Agents into health systems, specialty practices, FQHCs and behavioral health networks means the forecast has to hold up against a crowded, well-funded market, not just survive an internal review. I would start where the Sensata program started: build the scorecard that shows exactly where each rep is losing deals, then turn that pattern into the training the team runs before the next release ships.
