Hiring Team, Palo Alto Networks

Your posting asks for someone to architect partner coverage, tiering and discount and margin structures across Distributors, National Resellers, GSIs and MSSPs, then make sure those structures hold up once volume hits them. I built that exact kind of structure at Sensata: realigned distributor and channel-partner margins from 53% to 61% in under two quarters by repricing parts sold through distribution. The tiering looks clean on a slide; it only holds once the discount governance and the incentive design behind it agree with each other, and that is the part most ecosystem redesigns get wrong first.

The rigorous analytical modeling and the cadence your req describes are also familiar ground. I built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata: 1,200 pricing opportunities tracked against a $627M target across 3 regions, 4 product families and 20 product lines, with its own pipeline funnel, regional scorecards and win-rate view, and it surfaced $433M in margin gaps for leadership to prioritize by salesperson and product line. I run that same operating rhythm now at Applied Materials: leadership decks and weekly and quarterly business reviews, the bi-weekly-review-and-QBR discipline your req wants stood up for Cortex.

Before any of that, I led a 5-consultant team through an unscoped market-entry engagement for Safran: turning 170 facilities into a SAM of 28 across four verticals and positioning three product lines, the same kind of ambiguous, multi-year strategy problem your 3-Year Partner Ambition work is. I have also run the pre-sales side directly: sales enablement decks and case studies for 50+ reps at Sensata lifted win rates 30%, and I ran customer interviews with OEMs and distributors myself, so I know the partner conversation does not stop at the margin spreadsheet.

I would like to bring that combination, partner-margin architecture, pipeline and deal-governance modeling, and a bias for running the cadence rather than just designing it, to the Cortex GTM team. Proof trail at adhithyabhaskar.vercel.app/ref/palo-alto-networks.
