PITCH DECK | ADOBE PRODUCT MANAGER, MONETIZATION STRATEGY

Monetizing GenAI and agentic capabilities across Creativity and Productivity takes someone who has already run the segment-model-consensus loop on a live, multi-$100M pricing book. I have run that loop, just on a different portfolio.

Pricing and packaging strategy, financial scenario modeling and executive influence from someone who built the guardrail engine, not just presented on one.

- **$700K+** margin recovered in 2 quarters via segmented pricing strategy at Sensata
- **$627M target, 1,200 opportunities** segmented by region, product family and product line
- **53% to 61%** distributor margin lift from repriced, documented packaging logic
- **R-based regression** modeling demand elasticity and profit-maximizing price points
- **Claude AI agents** in hands-on daily use, automating recurring pricing analysis

WHY THIS DECK EXISTS

Monetizing GenAI and agentic features across Creativity and Productivity means segmenting, modeling and winning executive consensus on the same pricing decision all at once.

What losing that discipline runs into

A packaging decision without a documented pricing rationale does not fail loudly. It fails as a GenAI feature bundled in for free because nobody ran the scenario model, a pricing test that gets re-litigated every quarterly review, and a sales play that Finance and Engineering interpret three different ways.

Product, Finance, Engineering and Sales all touch the same monetization decision in a matrixed org, so a gap in the financial model or the executive story becomes everyone's guessing game at the next review, not just one team's problem.

The fix is not another pricing deck. It is someone who treats segmentation, financial modeling and executive consensus as one connected discipline instead of three separate jobs.

What I have already run

At **Sensata**, I segmented 1,200 pricing opportunities by region, product family and product line against a $627M target, the same packaging-and-pricing-strategy loop this role runs for Creativity and Productivity offers.

At **PriceKeel**, I built the guardrail engine and the audit trail a monetization decision gets checked against before it reaches Finance, the documentation discipline a new GenAI capability needs before it ships with a price attached.

Both mean I have sat on the modeling side and the consensus-building side of the same pricing decision, not just one or the other.

A Product Manager who defines pricing and packaging strategy, runs financial scenario models and wins executive approval in a complex matrixed org is describing this exact loop: segment the opportunity, model the scenario, document the decision so Finance, Engineering and Sales all trust it.

THE REQ, MAPPED

What the Monetization Strategy opening asks for, and where the proof already sits.

What the role covers

Define and optimize pricing and packaging strategy for offers within the Creativity and Productivity segment.

Develop financial models that simulate customer behavior and project costs; scenario analysis estimating impact on market penetration, revenue and margin.

Develop and present arguments that articulate strategy and ROI to acquire executive approval.

Engage with engineering, finance, and operational teams on implementation within existing quote-to-cash systems.

My Proof

Pricing and packaging strategy: segmented 1,200 pricing opportunities by region, product family and product line against a $627M target at Sensata, recovering $700K+ in margin in 2 quarters.

Financial and scenario modeling: built R-based regression models forecasting demand elasticity and profit-maximizing price points, and build inflection-point, market-penetration and margin scenario models at Applied Materials.

Executive ROI argument: built the leadership decks that won executive approval for every pricing move across a complex, matrixed Finance, Sales and Engineering organization at Sensata.

Quote-to-cash and systems: set up and run CRM and CPQ, forecast and pipeline reviews, and deal approvals at PriceKeel; partnered with Finance on AP26 revenue models and customer quotes at Sensata.

THE PROOF, IN DEPTH

Bleeders and Leakers: segment every pricing opportunity before it reaches an executive review.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, regional scorecards, win rate, avg $/win and stage distribution checked before leadership set the next quarter's targets.

$700K+

Margin Recovered, 2 Quarters

Segmented pricing opportunities by region, product family and product line, the same packaging-and-pricing breakdown this role runs across Creativity and Productivity offers.

53% to 61%

Distributor Margin Lift

Repriced the channel packaging logic and documented it for governance review, so the new structure held past the first quarter.

$433M

Margin Gaps Surfaced

Every gap traced to a specific record by salesperson and product line, the same segment-level detail an executive-ready ROI story needs.

At PriceKeel that same instinct became the operating model: build the guardrail, model the scenario, document the decision. That is the discipline a monetization call on a new GenAI capability needs before it reaches Finance, not just the willingness to ship fast.

FIRST 30 DAYS

What the first month owning monetization strategy at Adobe looks like.

WEEK 1

Learn the current packaging and GenAI monetization guardrails

Sit with Pricing, Product Management and Finance to walk the current Creativity and Productivity packaging structure, the financial-model documentation standard, and shadow one scenario-analysis cycle end to end.

Why first: the same instinct that had me learn PriceKeel's own CPQ and discount logic before building a guardrail on top of it.

WEEK 2-3

Own a packaging and scenario-modeling cycle

Take ownership of one offer's pricing and packaging analysis end to end: segment the opportunity, build the financial model, and present the market-penetration, revenue and margin scenario at the next executive review.

Why now: the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.

WEEK 4

Close the quote-to-cash and sales-enablement loop

Document one pricing decision's model assumptions, draft the sales play and training guideline for the new packaging, and run the post-mortem framework for the next pricing change.

Why this fast: a governance trail only earns its keep if it gets re-checked every cycle instead of trusting last quarter's setup.

CLOSE

You are hiring someone to turn pricing and packaging strategy for GenAI and agentic features into a financial model Finance and Engineering can execute, and a story that wins the room. I have already built that discipline, from both sides of the decision.

The core proof is Sensata: a Power BI system segmenting **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters, all inside a complex, matrixed organization.

What is harder to find is someone who has also built the guardrail engine and audit trail behind a pricing decision from the ground up. **I built that at PriceKeel**, so the modeling and consensus-building discipline this role runs is not something I would need to learn on the job.
