Hiring Team, interface.ai

Your posting asks for a product marketer who can own go-to-market end to end for a product line and still carry it through launch, enablement and measurement. At Sensata, I owned exactly that scope for a new line of sensing products sold to OEM and distributor engineers: positioning, pricing, channel and launch. The hard part was never the feature list, it was turning dense technical specs into a story a skeptical technical buyer would act on. That program drove $2M+ in first-year revenue and a 15% lift in conversion on priority launches.

The financial institution buyer you are selling agentic AI into asks the same question an OEM engineer asked me: show the proof, not the pitch. I ran 30+ structured interviews with OEMs and distributors to pressure-test messaging before it shipped, then armed 50+ reps with the decks, battlecards and case studies that moved win rates 30%. I tracked competitor moves and market share across EMEA and the US as a weekly habit, not a quarterly exercise, and fed those findings straight into positioning and demand-generation calls.

At Applied Materials today, I partner with Sales, Engineering and Accounts to size a fast-moving semiconductor market from technical and field data, and I automate the recurring parts of that work with AI agents built on Claude instead of rebuilding the same analysis every cycle. I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, so agentic AI is not a topic I write about, it is a product I design and sell against every week. That combination of technical fluency and buyer-side discipline is what a team selling conversational AI into banks and credit unions needs from its product marketer.

What I would bring to interface.ai is a product marketer who has already run the loop your posting describes: positioning built from real technical depth, tested against the buyer, armed for the sellers, and measured against a revenue number, not left as a deck in a folder. Proof trail at adhi-product-ai.vercel.app/ref/interface-ai.
