Hiring Team, Fieldwire by Hilti

Your posting wants someone who can turn GTM pipeline, conversion and forecast data into executive-ready review materials for Sales, Marketing and Customer Success leadership. At Sensata I built the Bleeders & Leakers Power BI dashboard that tracked 1,200 pricing opportunities against a \$627M target across three regions, with win rate, average \$/win and stage distribution surfaced by salesperson, which is the same read a GTM leader needs on pipeline health. That dashboard is also where I found \$433M in margin gaps for leadership to act on, and closing them recovered \$700K+ in margin in two quarters.

I run that same discipline today as founder of PriceKeel, a B2B SaaS pricing tool, where I own the CRM, CPQ, and the forecast and pipeline review cadence that keeps Sales, Marketing and Finance looking at one number. Investment and territory decisions are only as good as the operating metrics behind them, and building the guardrail engine that flags discount exceptions before they reach a quote taught me where operational friction actually lives in a deal cycle, not just where a process document says it should.

At Sensata I also partnered directly with senior executives on AP26 revenue models and multimillion-dollar customer quotes, and raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution, the kind of cross-functional, data-backed project that moves a GTM number rather than just reporting it.

At Applied Materials I automate recurring forecasting and market-sizing work with AI agents built on Claude instead of rebuilding the same model every cycle, time that goes straight back into the pipeline and forecast reviews a role like this runs on.
